Microsoft

70-668 PRACTICE EXAM

PRO: Windows SharePoint Services 2010 Administration

Total Questions 226/15 Case Study

Question: 1

HOTSPOT

You are the administrator for a SharePoint 2010 farm. You need to grant the Self-Service Site Creation permission to users to create their own sites for the www.adatum.com/win7 web application. You also need to ensure that users provide a secondary contact. What should you do? (To answer, configure the appropriate option or options in the dialog box in the answer area.)

Answer:

**Explanation:**

Select “Win7” in the Web Application drop-down box.
Select the “On” button.
Tick the “Require Secondary Contact” checkbox.

Question: 2

You are the administrator for a SharePoint 2010 farm. You plan to deploy a Web Part as a sandbox solution in a production environment. You need to identify the highest degree of isolation. What should you do? (Choose the best answer.)

- A. Use local load balancing and dedicate a separate server to run sandboxed solutions.
- B. Use remote load balancing and run sandboxed solutions only on specific servers.
- C. Use remote load balancing and dedicate a separate server to run sandboxed solutions.
- D. Use local load balancing and run sandboxed solutions only on specific servers.

Answer: C

Explanation:

You can increase the isolation of sandboxed solutions by using remote load balancing and by running the sandboxed solutions service only on specific servers. In a production environment, we recommend that you use remote load balancing and dedicate a separate server to running sandboxed solutions. For information about how to decide which load-balancing scheme to use, see Plan to load balance sandboxed solution code in Plan sandboxed solutions (SharePoint Server 2010).

Question: 3

You are the administrator for a SharePoint 2010 farm. You need to plan the capacity workload for the web front-end servers. What information should you collect? (Choose the best answer.)

- A. All users and peak load
- B. Concurrent users and peak load

- C. Concurrent users end average throughput each day
- D. All users and average throughput each day

Answer: B

Question: 4

You have a SharePoint Server 2010 server farm that contains 10 Web servers. You need to ensure that the processing of SharePoint user solutions is evenly distributed across the servers in the farm. What should you do in the server farm?

- A. Configure the Data Retrieval Service.
- B. Start the Sandboxed Code Service on all of the Web servers.
- C. Implement Windows Network Load Balancing on all of the web servers.
- D. Create a new Secure Store Service application.

Answer: B

Question: 5

Your company has an office in New York and an office in Seoul. The offices connect to each other by using a WAN link. The New York office contains all sales and marketing staff. The Seoul office contains all manufacturing and research staff.

The network contains a single Active Directory domain.

You plan to deploy SharePoint Server 2010 to support both offices.

You need to recommend a solution that meets the following requirements:

Network traffic across the WAN link must be minimized.

All documents must be stored on servers located in the office where the documents were created.

SharePoint users in New York and Seoul must be able to find documents in both offices when they perform searches.

What should you recommend?

- A. a server farm in each office that has a Web server located in each office
- B. a single server farm that uses two site collections and a Web server in each office
- C. a server farm in each office and a search federation between the farms
- D. a single server farm that uses two content databases and Microsoft SQL Server database mirroring between the two offices

Answer: C

Question: 6

DRAG DROP

You are the administrator for a SharePoint 2010 farm that contains a document library that has multiple content types. No additional metadata is gathered when documents are uploaded. You need to ensure that users can refine their document searches based on the content type of the document. What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Servers	Roles
Server A	• Web Front End • All service applications
Server B	• Microsoft SQL Server 2008

Answer:**Question: 7****DRAG DROP**

You are the administrator for a SharePoint 2010 farm. The farm topology is as shown in the following table.

You want to improve the performance of the search. You need to add an application server named Server C. Which component should you place on each of the three servers? (To answer, drag the appropriate server or server to the correct location or locations in the answer area.)

Answer:

Question: 8

You plan to implement a SharePoint Server 2010 server farm. The farm will be used to store documents that are as much as 100 MB.

You need to recommend a search solution to meet the following requirements:

Provide security-trimmed search results.

Provide thumbnail previews of search results.

Provide the ability to filter searches by using metadata.

Minimize costs.

What should you recommend?

- A. Microsoft SharePoint search server
- B. Microsoft FAST Search Server
- C. Microsoft Search Server Express
- D. Microsoft SQL Server Full-Text Search

Answer: B

Question: 9

You have a SharePoint Server 2010 server farm. Every night, you perform a full backup of the farm and a backup of all the SharePoint databases. You are planning the recovery strategy for the Secure Store Service. You need to identify which information is required to recover the Secure Store Service. What should you identify?

- A. the Secure Store service passphrase
- B. the Central Administration application pool identity
- C. the Secure Store Service application pool identity
- D. the farm passphrase

Answer: A

Question: 10

You have a perimeter network and an internal network.

You plan to use SharePoint Server 2010 to host the company's public Web site.

You need to recommend a solution for the site that meets the following requirements:

Content data must be stored inside the internal network.

The number of servers must be minimized.

What should you include in the solution?

- A.
 - Deploy a Web server in the perimeter network.
 - Create a new Active Directory domain in the perimeter network.
 - Deploy a Microsoft SQL Server server in the internal network.
- B.
 - Deploy a Web server in the perimeter network.
 - Deploy an Active Directory Lightweight Directory Services (AD LDS) server in the perimeter network.
 - Deploy a Microsoft SQL Server server in the internal network.
- C.
 - Deploy a Web server in the perimeter network.
 - Deploy an Active Directory Lightweight Directory Services (AD LDS) server in the perimeter network.
 - Deploy a Microsoft SQL Server server in the perimeter network.
- D.
 - Deploy a Web server in the perimeter network.
 - Join the Web server to the internal Active Directory domain.
 - Deploy a Microsoft SQL Server server in the internal network.

Answer: D

Question: 11

You plan to deploy a SharePoint 2010 farm.

You need to ensure that the following requirements are met:

The farm must handle up to 15,000 users.

The farm must be optimized for search and load balancing

The farm must be cost-efficient.

Which farm deployment topology should you use? (Choose the best answer.)

A.

- A first web server that has the Query component
- A second web server that has the Query component
- A single application server that has all other service components
- A first database server that contains Search databases
- A second database server that contains all other SharePoint databases

B.

- A first web server that has the Query component
- A second web server that has the Query component
- A single application server that has all service components
- A single database server that contains all SharePoint databases.

C.

- A first web server that does not have the Query component
- A second web server that does not have the Query component
- A third web server that has the Query component
- A first application server that has the query and crawl component
- A second application server that has all other application server components
- A first database server that contains Search databases
- A second database server that contains all other SharePoint databases

D.

- A first web server that has the Query component
- A second web server that has the Query component and all other service components
- A single database server that contains all SharePoint databases

Answer: A

Question: 12

DRAG DROP

You are the administrator for a SharePoint 2010 farm. You use Kerberos authentication and dedicated service accounts for each SharePoint 2010 service.

You want to use Microsoft Excel Services and Microsoft Visio Services service applications to analyze Line-of-Business (LOB) data located on a Microsoft SQL Server in the same domain.

Microsoft SQL Server Reporting Services (SSRS) in SharePoint Integrated mode will be used to report data located on another domain in the forest.

Which type of delegation should you use for the service accounts? (To answer, drag the appropriate delegation type or types to the correct location or locations in the answer area.)

Answer:

Question: 13

You plan to deploy SharePoint Server 2010 and to enable self-service site creation.

You need to recommend a Web application configuration to meet the following requirements:

Users must be allowed to create site collections.

Site collections created by Web developers must be deleted manually.

Site collections created by managers must be deleted automatically if they are not used for 120 days. Site collections created by other users must be deleted automatically if they are not used for 60 days. The number of site collections must be minimized.

What should you include in the recommendations?

A. One Web application that contains one site collection and one Web application that contains two site collections

B. One Web application and one site collection

C. Three Web applications that each contains one site collection

tion that contains three site collections

Answer: C

Question: 14

DRAG DROP

You are the administrator for a SharePoint 2010 farm.

You plan to acquire SharePoint 2010 licenses.

Which features are included in each version of SharePoint? (To answer, drag the appropriate version or versions to the correct location or locations in the answer area.)

Answer:

Question: 15

You are the administrator for a SharePoint 2010 farm.

You need to design a restore plan for end users of documents to meet the following requirements:

Each user must be able to recover documents that they have deleted.

Deleted items must be retained for 30 days.

End users must be able to permanently delete documents when needed.

What should you do? (Choose the best answer.)

A.

- Turn on the first-stage Recycle Bin.
- Create a Windows Task Schedule for daily backup of sites.

B.

- Turn on the first-stage Recycle Bin.
- Turn off the second-stage Recycle Bin.

C.

- Turn on the first-stage Recycle Bin.
- Use Central Administration to back up and restore sites.

D.

- Turn off the first-stage Recycle Bin.
- Use the Microsoft STSADM command-line tool to perform the backup and restore of sites,

Answer: B

Question: 16

DRAG DROP

You are the administrator for a SharePoint 2010 farm.

Securable object	Description
SiteA/SubsiteA	Sensitive group
SiteA/SubsiteA/LibraryA	Non-sensitive data
SiteA/SubsiteA/LibraryB	Non-sensitive documents, but has one or more sensitive items
SiteA/SubsiteB	Group shared project information
SiteA/SubsiteB/LibraryA	Non-sensitive data, but has one or more sensitive items
SiteA/SubsiteB/LibraryB	Non-sensitive documents, but has a special folder that contains sensitive items
	Move the .mdf, .ndf, and .ldf files associated with the database from Server1 to Server2.
	Pause any service applications and services that might attempt to run against the database, including timer jobs and search crawls.
	Remove the content database from the web application.
	Back up the database in Server1.
	Restore the database in Server2.
	Add the content database to the destination web application.
	Restart any service applications and services that must be run against the database, including timer jobs and search crawls.

Use from a Microsoft SQL Server named Server1 to an SQL

What should you do? (To answer, move the appropriate actions from the list of actions in the answer area and arrange them in the correct order.)

Answer:

Question: 17

DRAG DROP

You are the administrator for a SharePoint 2010 farm.

You create a top-level site named SiteA that uses Windows authentication and the default permission set. You need to design the security schema for the following taxonomy:

Source Heading	Securable object
Inherited	Inherited
Unique, has Copy permissions from SiteA	Unique, has Copy permissions from SiteA
Inherited, has unique permissions at the item level	Inherited, has unique permissions at the item level
Inherited, has unique permissions at the folder and item levels	Inherited
	Inherited, has unique permissions at the item level
	Inherited, has unique permissions at the folder and item levels

should you implement? (To answer, drag the appropriate permission or permissions to the in the answer area.)

Answer:

Question: 18

You have a SharePoint Server 2010 server farm. The farm contains the servers configured as shown in the following table.

Extend the web application to a new website
Set the Allow Anonymous setting on the website extension to Yes.
Set the Allow Anonymous setting on the new web application to Yes.
Set the Alternate Access Mapping setting to http://books.fabrikam.com
Set the Anonymous Access Permission setting on the site collection to Entire Site.
Set the Host Header setting on the website extension to http://books.fabrikam.com

You need to ensure that Server2 never crawls SharePoint content through Server1. What should you create?

- A. an alternate access mapping
- B. a crawl database
- C. a crawl component
- D. an entry in the Hosts file

Answer: D

Explanation:

A dedicated web front end for crawling. You can accomplish this adding the IP and host name of the farm in the hosts file of the index server.

Question: 19

DRAG DROP

You are the administrator for a SharePoint 2010 farm.

You need to make a site collection publicly available at the following URL:

<http://books.fabrikam.com>.

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Question: 20

DRAG DROP

You are the administrator for a SharePoint 2010 farm.

You are planning to use various Unified Logging Service (ULS) log types.

Which features are included in each ULS log type? (To answer, drag the appropriate log type or types to the correct location or locations in the answer area.)

Answer:

Question: 21

You have a SharePoint Server 2010 server farm. The farm contains two Web servers. The load between the two Web servers is distributed by using DNS round robin. You need to ensure that the farm is available for all users if one of the web servers fails. What should you do?

- A. Implement Windows Network Load Balancing.
- B. Add a new Web server to the farm.
- C. Configure netmask ordering.
- D. Configure alternate access mappings.

Answer: A

Question: 22

You are the administrator for a SharePoint 2010 farm that spans the corporate network and perimeter network. Your company network contains Active Directory accounts for internal users in the corporate network. The network also includes separate Active Directory accounts for external users in the perimeter network. You want to prevent the perimeter network from accessing internal user accounts. You need to design the extranet farm topology. Which type of topology should you use? (Choose the best answer.)

- A. Configure a one-way domain trust where the corporate network trusts the perimeter network.
- B. Configure a one-way domain trust where the perimeter network trusts the corporate network.
- C. Consolidate the perimeter network and corporate network to use a single Active Directory infrastructure.
- D. Configure a two-way domain trust.

Answer: B

Question: 23

You have a SharePoint Server 2010 server farm. The farm contains a single Web application.

The Web application contains 500 site collections.

You need to recommend a solution to ensure that a user can manage all of the site collections.

You must achieve this goal while meeting the following requirements:

Ensure that the user cannot create Web applications.

Use the minimum amount of administrative effort.

What should you recommend?

- A. Configure a managed account.
- B. Add the user to the Farm Administrators group.
- C. Define a policy for the Web application.
- D. Modify the site collection administrators.

Answer: C

Explanation:

Allowing or denying the ability to create a Web application can be done by using policies.

Question: 24

You are the administrator for a SharePoint 2010 farm.

A research team manages documents, photos, video files, and metadata for a clinical case study.

You need to design a logical taxonomy for this clinical case study.

What should you implement? (Choose the best answer.)

- A. A document set.
- B. A document library.
- C. A document workspace, a photo gallery, and an asset library.
- D. A set of folders within a document library.

Answer: A

Question: 25

You are the administrator for a SharePoint 2010 farm.

You need to implement an enterprise search technology that meets the following requirements:

Allows users to search people and their expertise.

Crawls content outside the SharePoint.

Provides metadata-driven refinement in the top results.

Provides phonetic searches.

Provides search email alerts.

Which search technology should you use? (Choose the best answer.)

- A. SharePoint Server 2010 Search
- B. FAST Search Server 2010 for SharePoint
- C. Search Server 2010 Express
- D. User Profile Service

Answer: A

Question: 26

You need to identify which factors must be considered when implementing site use confirmation and automatic deletion. Which two factors should you identify? (Each correct answer presents part of the solution. Choose two.)

- A. how often to notify the site owners
- B. the size of the documents stored in inactive sites
- C. the site template used to create the site collection
- D. the number of days a site is inactive

Answer: C,D

Question: 27

DRAG DROP

You are the administrator for a SharePoint 2010 farm. You need to deploy a custom site to the top site of a site collection on the production farm. What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Question: 28

You have two SharePoint Server 2010 server farms named Farm1 and Farm2. Farm1 is located in the internal network. Farm1 hosts an authoring site collection that was created by using a publishing site template. Farm2 is located in the perimeter network; Farm2 hosts a production site collection that was created by using a publishing site template. A standard content deployment job is scheduled to run every day to move content from Farm1 and Farm2. You need to recommend a solution to ensure that users can immediately deploy content from Farm1 to Farm2. The solution must use the minimum amount of administrative effort. What should you include in the solution?

- A. site definitions
- B. a content deployment Quick Deploy job
- C. site templates
- D. Send to connections

Answer: B

Question: 29

You plan to implement SharePoint Server 2010 for your company's public Website. The site will display information about the products that the company sells. You need to ensure that all the Web pages in the site display the company logo at the top of the page and a copyright notice at the bottom of the page. What should you implement?

- A. master pages
- B. variations

- C. page layouts
- D. site templates

Answer: A

Question: 30

You plan to deploy a SharePoint 2010 farm.

You need to ensure that the following requirements are met:

The farm must handle up to 10,000 users.

The farm must be optimized for search and load balancing

The farm must be cost-efficient.

Which farm deployment topology should you use? (Choose the best answer.)

A.

- A first web server that has the Query component
- A second web server that has the Query component
- A single application server that has all other service components
- A first database server that contains Search databases
- A second database server that contains all other SharePoint databases

B.

- A first web server that has the Query component
- A second web server that has the Query component
- A single application server that has all service components
- A single database server that contains all SharePoint databases.

C.

- A first web server that has the Query component
- A second web server that has the Query component and all other service components
- A single database server that contains all SharePoint databases

D.

- A first web server that does not have the Query component
- A second web server that does not have the Query component
- A third web server that has the Query component
- A first application server that has the query and crawl component
- A second application server that has all other application server components
- A first database server that contains Search databases
- A second database server that contains all other SharePoint databases

Answer: A

Question: 31

You plan to deploy a SharePoint Server 2010 server farm. The farm will contain three sites named Sales, Corp, and Test.

You plan to monitor the total storage used by each site.

You need to recommend a Web application and site collection configuration. The configuration must meet the following requirements:

- Provide the ability to track the storage used by each specific site.
- Minimize the number of Web applications and site collections.

Which configuration should you recommend?

- A. One Web application, one site collection, and two subsites
- B. One Web application and three site collections
- C. Three Web applications that each have one site collection
- D. One Web application, one site collection, and three subsites

Answer: B

Question: 32

You are load testing a SharePoint Server 2010 server farm. You need to simulate 30,000 concurrent user connections. Which tool should you use?

- A. Internet Information Services (IIS) Manager
- B. Microsoft Visual Studio
- C. Microsoft SQL Server Management Studio
- D. SQL Server Profiler

Answer: B

Question: 33

DRAG DROP

You are the administrator for a SharePoint 2010 server farm named Farm1. You create a second farm named Farm2 that is publicly available to host a public website. You need to design a solution that will allow you to deploy web content from Farm1 to Farm2 on a scheduled basis. What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Question: 34

You plan to deploy a SharePoint Server 2010 server farm. The farm will contain a Web application for an intranet site and a Web application for an extranet site.

The intranet will contain the following three content areas:

Human resources

Finance

Operations

The extranet will contain the following two content areas:

Partners

Customers

All content databases will be backed up by using Microsoft SQL Server.

You need to recommend the minimum number of site collections required for the farm.

You must ensure that each content area can be restored independently.

How many site collections should you recommend?

- A. 2
- B. 7
- C. 1
- D. 5

Answer: D

Question: 35

You plan to implement SharePoint Server 2010 on your company's intranet. The company has a custom application that contains the contact information of all users. You need to ensure that you can use the contact information to create custom audiences. What should you implement?

- A. Access Services and the User Profile Service
- B. Business Connectivity Services and Access Services
- C. Business Connectivity Services and the User Profile Service
- D. The Managed Metadata Service and the User Profile Service

Answer: C

Question: 36

You are the administrator for a SharePoint 2010 farm. You need to plan the capacity workload for the web front-end servers. What information should you collect? (Choose the best answer.)

- A. All users and peak load
- B. Concurrent users and peak load
- C. Concurrent users and average throughput each day
- D. All users and average throughput each day

Answer: B

Question: 37

You have a SharePoint Server 2010 server farm that contains one Web server. The Web server has only one IP address. You plan to implement the following separate Web applications:

`http://portal.contoso.com`
`http://intranet.contoso.com`
`http://www.contoso.com`

You need to recommend a solution to ensure that users can access all three Web applications.

What should you include in the solution?

- A. host headers
- B. handler mappings
- C. extended zones
- D. alternate access mappings

Answer: A

Explanation:

When you extend a SharePoint web application, you are telling SharePoint to go to IIS and create a new site, but SharePoint will use it to show the same content. You would normally do that to support different security, authentication and URLs between an Internet site, Intranet and Extranet, for example. When you add a host header it is equivalent to going to IIS and modifying the HTTP bindings for a site, and adding another URL or port.

Generally, for simplicity, it is best to let SharePoint manage IIS and not go changing things in IIS Manager if you can avoid it.

Host Header site collections are a mechanism to allow you to map different host headers to individual site collections within the same SharePoint web application.

The purpose of alternate access mappings is to deal with the situation where you have a load balancer or a proxy server that translates from an external URL to your server's internal URL. This ensures that the relative URLs generated by SharePoint when rendering pages are consistent with the external URL. Configuring alternate access mappings does not automatically add host header entries.

Question: 38

You are the administrator for a SharePoint 2010 farm that contains a document library that has multiple content types. No additional metadata is gathered when documents are uploaded.

You need to ensure that users can refine their document searches based on the content type of the document. What should you do? (Choose the best answer.)

- A. Create a secure store application for the document types and a managed property that references the secure store.

refinement panel definition.

B. Create a new list that includes a column to store the document type. Add a lookup to this list in the document content type. Crawl the property, create a managed property and mapping, and add the property to the search refinement panel definition.

C. Create a choice column in the document content type. Crawl the property, create a managed property and mapping, and add the property to the search refinement panel definition.

D. Create a managed metadata term set for document types and include the managed metadata in the document content type. Add the new column to the search refinement panel definition.

Answer: C

Question: 39

DRAG DROP

You are the administrator for a SharePoint 2010 farm.

You are configuring Microsoft Excel Services and Microsoft Visio Graphics Services that will access a search application from another farm.

You need to ensure that the following requirements are met:

High availability of the server

Maximum response time

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Question: 40

You are the administrator for a SharePoint 2010 farm. The farm uses the user profile service to synchronize user profiles of employees from Active Directory. Your company stores contact information of employees in a separate Microsoft SQL Server database.

Currently, user profiles do not contain contact information of all employees.

You need to design a solution that will synchronize contact information of employees from the SQL database into user profiles.

What should you do? (Choose the best answer.)

A. Create a Business Connectivity Services (BCS) external content type in Microsoft Visual Studio 2010 connected to the SQL database. Then, configure the user profile service to import BCS data, and start a full import.

B. Use the managed metadata service to create a term set for the employee contact fields. Then, configure the user profile service to use this term set, and start a full import.

C. Run the following SharePoint Management PowerShell commands:

```
$Model = Get-SPBusinessDataCatalogMetadataObject -BdcObjectType "Model" -Name
```

```
"ContosoModel" -ServiceConext
```

```
http://contoso
```

```
Export-SPBusinessDataCatalogModel -Identity $Model -Path "C:\folder\model.bdcm"
```

D. Use Microsoft Visual Studio 2010 to create a timer job that synchronizes data between the SQL database and profile store.

E. Create a Business Connectivity Services (BCS) external content type in SharePoint Designer 2010 connected to the SQL database. Then, configure the user profile service to import BCS data, and start a full import.

Answer: E

Question: 41

You have a SharePoint Server 2010 server farm. You plan to implement My Sites. You need to recommend a solution that prevents personal profile data from appearing in search results. What should you recommend?

A. Information management policies

B. Audiences

C. User Profile Services policies

D. Access Services

Answer: C

Question: 42

You are the administrator for a SharePoint 2010 farm. The marketing team in your company manages documents, photos, video files, and metadata for an advertising campaign. You need to design a logical taxonomy for the specific campaign. What should you implement? (Choose the best answer.)

- A. A set of folders within a document library.
- B. A document library.
- C. A document set.
- D. A document workspace, a photo gallery, and an asset library.

Answer: C

Question: 43

You have 10 SharePoint Server 2010 Web servers. All of the servers have the query component installed. You need to ensure that search requests are distributed across all Web servers. What should you implement?

- A. content sources
- B. a crawler impact rule
- C. a crawl rule
- D. index partitioning

Answer: D

Question: 44

DRAG DROP

You are the administrator for a SharePoint 2010 server farm named Contoso Intranet. You create a second farm named Contoso Public that is publicly available to host a public website. You need to design a solution that will allow you to deploy web content from Contoso Intranet to Contoso Public on a scheduled basis. What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Question: 45

You have a SharePoint Server 2010 server farm that contains two servers. You need to recommend a solution to ensure that both servers have a complete copy of the index. What should you recommend?

- A. Add a mirror query component
- B. Add a new crawl database
- C. Add a new crawl component
- D. Add a new query component

Answer: A

Question: 46

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users. The farm uses Active Directory for authentication. The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

You plan to implement SSL in WebApp1.

You need to recommend a solution to ensure that the internal users can access WebApp1 by using HTTP and HTTPS. What should you include in the recommendation?

- A. service application groups
- B. Remote BLOB Storage (RBS)
- C. the Access Services service application
- D. Microsoft Visual Studio 2010
- E. the Secure Store Service service application
- F. Information Rights Management (IRM)
- G. user policies
- H. managed accounts
- I. cross-firewall access zones
- J. Network Access Protection (NAP)
- K. SharePoint Health Analyzer

- L. a BLOB cache
- M. Active Directory Federation Services (AD FS)
- N. Network Load Balancing (NLB)
- O. an ASP.NET Membership Database
- P. alternate access mappings

Answer: P

Question: 47

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users. The farm uses Active Directory for authentication. The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

You need to recommend a solution to authenticate the external users by using the internal Active Directory infrastructure.

What should you include in the recommendation?

- A. Network Access Protection (NAP)
- B. Active Directory Federation Services (AD FS)
- C. The Access Services service application
- D. Network Load Balancing (NLB)
- E. Microsoft Visual Studio 2010
- F. an ASP.NET Membership Database
- G. Remote BLOB Storage (RBS)
- H. the Secure Store Service service application
- I. Information Rights Management (IRM)
- J. a BLOB cache
- K. managed accounts
- L. service application groups
- M. SharePoint Health Analyzer
- N. alternate access mappings
- O. User policies
- P. cross-firewall access zones

Answer: B

Question: 48

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.

WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

You need to simulate concurrent user connections to the internal farm.

What should you include in the recommendation?

- A. Network Load Balancing (NLB)
- B. alternate access mappings
- C. Information Rights Management (IRM)
- D. user policies
- E. SharePoint Health Analyzer
- F. Remote BLOB Storage (RBS)
- G. an ASP.NET Membership Database
- H. the Access Services service application
- I. Network Access Protection (NAP)
- J. the Secure Store Service service application
- K. Microsoft Visual Studio 2010
- L. cross-firewall access zones
- M. managed accounts
- N. Active Directory Federation Services (AD FS)
- O. a BLOB cache
- P. service application groups

Answer: K

Question: 49

You plan to deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm will contain five front-end servers.

You need to recommend a method to split user requests equally across all of the front-end servers. The solution must ensure that all of the front-end servers are available by using the same IP address.

What should you include in the recommendation?

- A. Failover Clustering
- B. DNS round robin
- C. Network Load Balancing (NLB)
- D. Microsoft SQL Server database mirroring

Answer: C

Question: 50

DRAG DROP

You have a SharePoint Server 2007 Service Pack 2 (SP2) server farm. The farm contains a server named Server1. Server1 has Microsoft SQL Server 2008 R2 installed.

You deploy a new server named Server2.

You install SQL Server 2008 R2 and SharePoint Server 2010 Service Pack 1 (SP1) on Server2.

You plan to migrate from SharePoint Server 2007 SP2 to SharePoint Server 2010 SP1. After you complete the migration, you plan to remove Server1 from the network.

You need to plan the migration to meet the following requirements:

- Minimize administrative effort.
- Ensure that users can read content during the migration.
- Prevent the users from modifying or creating new content during the migration.

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Question: 51

You are planning a backup strategy for a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains two web applications named WebApp1 and WebApp2. WebApp1 contains two site collections named SiteCollection1 and SiteCollection2. WebApp2 contains a site collection named SiteCollection3. You need to recommend a backup strategy that provides the ability to restore WebApp1 independently from WebApp2. What should you include in the recommendation?

- A. Microsoft System Center Data Protection Manager 2010 backups
- B. Windows Server Backup backups
- C. SharePoint backups
- D. Microsoft SQL Server database backups

Answer: C

Question: 52

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. You plan to use Remote BLOB Storage (RBS). You need to recommend a backup strategy that will include the BLOB files in the backup. The solution must minimize costs. What should you include in the recommendation?

- A. Microsoft System Center Data Protection Manager
- B. Microsoft SQL Server database mirroring that uses FILESTREAM
- C. Microsoft SQL Server database backups

D. Microsoft SharePoint Server backups

Answer: D

Question: 53

DRAG DROP

Your company plans to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1, Farm2, and Farm3.

During the initial planning phase, you identify the following high-level requirements for each farm:

Farm1 will host shared service applications.

Farm2 will host content for the human resources department. The farm content will be searchable.

Farm3 will host content for all users. The users will be able to open Microsoft Word documents stored in the farm directly from a web browser.

You identify the following deployment requirements:

Server virtualization will not be used.

Farm1 must host service applications whenever possible.

The service applications must not run on servers that host webpages for end users.

The users must be able to access all services and all content in all of the farms if a single server fails.

You need to identify the minimum number of SharePoint servers required for each farm. How many servers should you identify?

To answer, drag the appropriate number to the correct farm in the answer area.

Answer:

Question: 54

DRAG DROP

You plan to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1, Farm2, and Farm3.

You identify the following requirements for each farm:

Farm1 will host content and sites for users located in Europe.

Farm2 will host content and sites for users located in North America.

Farm3 will be dedicated to hosting shared services for users located in Europe and North America.

You plan to deploy the following service applications for all of the users:

Excel Services

User Profile Service

Managed Metadata Service

You need to recommend to which farm each service application must be deployed. The solution must minimize the

number of service applications deployed to each farm.

Any services that can be shared must be deployed to Farm3.

Which service applications should you recommend?

To answer, drag the appropriate service application to the correct farm or farms in the answer area.

Answer:

Explanation:

Possible to share:

User Profile Services

Managed Metadata Service

Business Connectivity Services

Search Service

Secure Store Service

Web Analytics Service

Question: 55

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You need to modify the search infrastructure to meet the following requirements:

Users must be able to perform searches that only return results from content that is contained in a specific site.

When users perform searches, results from both SharePoint and Microsoft Bing must be displayed.

You need to recommend which SharePoint technology must be implemented to meet the requirements.

What should you recommend?

To answer, drag the appropriate technology to the correct requirement in the answer area.

Answer:

Question: 56

DRAG DROP

Your company is evaluating the development of three custom SharePoint solutions named Solution1, Solution2, and Solution3.

You identify the following requirements for the custom solutions:

Solution1 will aggregate information from multiple site collections.

Solution2 will retrieve data from multiple lists in a site. Solution2 must be load balanced between all front-end Web servers.

Solution3 will contain a workflow created by using Microsoft Visual Studio 2010. The workflow will contain custom code.

You need to recommend which type of solution must be used for each custom solution.

Which type of solutions should you recommend?

To answer, drag the appropriate solution type to the correct custom solution in the answer area.

Answer:

Question: 57

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains an Excel Services service application. You plan to display a Microsoft Excel file in a Web Part.

The Excel file will contain the following:

Data from a Microsoft SQL Server database

Custom calculations written in Microsoft Visual Studio

You need to identify which Excel Services configuration must be configured to display the Excel file. What should you configure?

To answer, drag the appropriate configuration to the correct location in the answer area.

Answer:

Question: 58

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. You also have a public site that is hosted on Microsoft SharePoint Online.

You need to recommend a search solution to meet the following requirements:

Provide users with the ability to search the SharePoint Online site and SharePoint on-premises simultaneously.

Provide search results from SharePoint Online and SharePoint on-premises in a single Web Part. What should you include in the recommendation?

- A. SharePoint Search Federation
- B. a content source
- C. search scopes
- D. a crawl rule

Answer: A

Explanation:

Search is one area which has some integration capabilities. Thought the integration is not ideal, as we can't share the relevance of the search results between the two environments. But what we can do is to have either two search boxes, one for on-premise content and one for the online content, or use federated search. With federated search you can do one search query, but get two separated results from two difference content sources showing up in two separate result sets. Below is a screenshot of search results from SharePoint and search results from Bing.

Question: 59

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You are planning the administrative model for search.

You identify different groups of users who will perform the following tasks:

- Manage authoritative pages.
- Manage shared search scopes.

You need to identify from which location you must configure permissions to ensure that the users can perform the required tasks. The solution must minimize the number of permissions assigned to each user.

Which locations should you identify?

To answer, drag the appropriate task to the correct location in the answer area.

Answer:

Question: 60

You are planning the deployment of a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm will have the Excel Services service application and the Managed Metadata Service service application deployed. You need to identify the minimum number of servers that must be purchased to meet the following requirements:
The service applications must be load balanced.
Hardware and software costs must be minimized.
Site collections must be available if a single server fails.
Microsoft SQL Server must not be installed on any front-end Web servers.
How many servers should you identify?

- A. 3
- B. 4
- C. 6
- D. 5

Answer: A

Explanation:

Server1 = Service Application (ExcelServices + MMS) + WFE
Server2 = Service Application (ExcelServices + MMS) + WFE
Server3 = SQL Server

Question: 61

You are planning the taxonomy of a SharePoint Server 2010 Service Pack 1 (SP1) server farm. You identify the following requirements:
The legal department will require a list view threshold of 1,000 items.
The accounting department will require a list view threshold of 2,000 items.
The manufacturing department will require a list view threshold of 1,000 items.
You need to identify the minimum number of web applications and site collections that must be created to meet the requirements.
How many web applications and site collections should you identify?

- A. Three web applications and three site collections
- B. One web application and three site collections
- C. Two web applications and two site collections
- D. One web application and two site collections

Answer: C

Explanation:

Threshold is set per webapplication

Question: 62

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You plan to create document repository sites for the sales department and the marketing department.

You identify the following requirements:

Files that are larger than 5 MB and are uploaded by users in the sales department must be stored in Remote BLOB Storage (RBS). All others files uploaded by the sales users must be stored in a Microsoft SQL Server database.

All files uploaded by users in the marketing department must be stored in a SQL Server database.

You need to recommend the minimum number of web applications, site collections, and content databases that must be created to meet the requirements.

What should you recommend?

- A. Two web applications and two site collections in two content databases
- B. One web application and two site collections in one content database
- C. One web application and one site collection in one content database
- D. One web application and two site collections in two content databases

Answer: D

Question: 63

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. You need to recommend a strategy to delete Microsoft Word documents from libraries two years after the documents are created. What should you include in the recommendation?

- A. site quotas and locks
- B. site collection policies
- C. item scheduling
- D. Word Automation Services

Answer: B

Question: 64

DRAG DROP

You are planning the deployment of SharePoint Server 2010 Service Pack (SP1).

You need to recommend the minimum editions of SharePoint that must be deployed to meet the following requirements:

Display data from Microsoft SQL Server databases in a SharePoint list.

Synchronize user profile data between SharePoint and Active Directory.

Provide users with the ability to view and refresh Microsoft Visio 2010 diagrams by using a web browser.

Which edition should you recommend for each requirement?

To answer, drag the appropriate edition to the correct requirement in the answer area.

Editions		Answer Area
SharePoint Foundation 2010	Display data from Microsoft SQL Server databases in a SharePoint list.	
SharePoint Server 2010 Standard	Synchronize user profile data between SharePoint and Active Directory.	
SharePoint Server 2010 Enterprise	Provide users with the ability to view and refresh Microsoft Visio 2010 diagrams in a web browser.	

Answer:

Question: 65

You plan to deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You plan to use InfoPath Forms Services.

You need to recommend which service application must be deployed to the farm.

Which service application should you recommend?

- A. State Service
- B. Managed Metadata Service
- C. Business Data Connectivity
- D. Application Registry Service

Answer: A

Question: 66

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You need to recommend a monitoring solution to meet the following requirements:

Monitor the most viewed pages.

Monitor the search query latency.

The solution must use the minimum amount of administrative effort.

Server name	Server operating system
APP1	32-bit version of Windows Server 2008 Enterprise 64-bit version of Windows Server 2008 Standard
SQL1	64-bit version of Windows Server 2003 Enterprise x64-bit version of Microsoft SQL Server 2005 Service Pack 3 (SP3)
WFE1	64-bit version of Windows Server 2008 Standard
WFE2	64-bit version of Windows Server 2003 Enterprise

What should you recommend?

To answer, drag the appropriate monitoring solution to the correct requirement in the answer area.

Answer:

Question: 67

You have a SharePoint Server 2007 Service Pack 2 (SP2) server farm. The farm contains four servers. The servers are configured as shown in the following table.

You plan to perform an in-place upgrade of the farm to SharePoint Server 2010 Service Pack 1 (SP1). You need to identify which software must be upgraded before you perform the upgrade. Which software should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

- A. the operating system on APP1
- B. the operating system on SQL1
- C. the operating system on WFE2

- D. SQL Server 2005 SP3 on SQL1
- E. the operating system on WFE1

Answer: A,C

Question: 68

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.
You plan to deploy a site for the sales department and a site for the finance department.
You identify the following search requirements for each site:
Content on the finance site must be indexed once daily.
Content on the sales site must be indexed every 15 minutes.
Each site must have independent search keywords and synonyms.
You need to recommend a logical structure to meet the search requirements of each site.
What should you recommend?

- A. One site collection, two sites, and two search scopes
- B. Two sites collections, two sites, and two search scopes
- C. Two sites collections, two sites, and two content sources
- D. One site collection, two sites, and two content sources

Answer: C

Question: 69

DRAG DROP

You are planning a recovery strategy for a SharePoint Server 2010 Service Pack 1 (SP1) server farm.
You identify the following requirements:
A document that a user deleted 15 days ago must be recovered.
A site collection that was deleted 20 days ago must be recovered.
You need to recommend which component must be used for each requirement. The solution must recover the data in the minimum amount of time.
What should you recommend?
To answer, drag the appropriate component to the correct requirement in the answer area.

Answer:

Question: 70

DRAG DROP

You plan to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms. The farms will be configured as shown in the following table.

You identify the following deployment requirements:

Users in the finance department must be able to search for finance content, to manage their user profile, and to use term stores.

Users in the human resources department must be able to manage their user profile and to view Microsoft Excel files by using a web browser.

You need to identify which service application or service applications must be deployed to each farm. Any services that can be shared must be deployed to Farm1.

Which service applications should you identify?

To answer, drag the appropriate service application or service applications to the correct farm in the answer area.

Answer:

Question: 71

DRAG DROP

Your company uses Microsoft SharePoint Online and SharePoint Server 2010 Service Pack (SP1) on-premises.

The corporate usage policy states that SharePoint Online must be used whenever possible.

You plan to implement three sites named Site1, Site2, and Site3.

The sites have the following requirements:

The users of Site1 must be able to create PerformancePoint dashboards,

The users of Site2 must be able to classify documents by using a taxonomy built by using the Term Store feature.

The developers of Site3 must be able to deploy custom sandbox Web Parts and Microsoft SharePoint Designer workflows to Site3.

You need to recommend in which SharePoint environment to create each site.

What should you recommend?

To answer, drag the appropriate environment to the correct site in the answer area.

Answer:

Components	Answer Area
Information Rights Management (IRM)	Log the name of each user who opens documents that use CT1.
the Record Center	Automatically route documents that use CT1 to a document library named Legal.
an information management policy	Log the name of each user who opens documents that use CT1.
the Content Type Catalogue	Automatically route documents that use CT1 to a document library named Legal.

Question: 72

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a site collection named Collection1. Collection1 contains a content type named CT1.

You need to recommend a content management strategy to meet the following requirements:

Log the name of each user who opens documents that use CT1.

Automatically route documents that use CT1 to a document library named Legal.

What should you include in the recommendation?

To answer, drag the appropriate component to the correct requirement in the answer area.

Answer:

Question: 73

DRAG DROP

You have four SharePoint Server 2007 Service Pack 2 (SP2) server farms. The farms are configured as shown in the following table.

You plan to migrate each farm to SharePoint Server 2010 Service Pack 1 (SP1).

You need to identify the migration strategy for each farm. The solution must minimize the amount of time required to migrate the farms.

Which migration strategy should you select for each farm?

To answer, drag the appropriate strategy to the correct farm in the answer area.

Answer:

Explanation:

You must be running Service Pack 2 (SP2) of Office SharePoint Server 2007 in a 64-bit Windows Server 2008 environment to perform an in-place upgrade to SharePoint Server 2010. If you are in a server farm environment, you must also be running a 64-bit version of Microsoft SQL Server 2008 R2, SQL Server 2008 with Service Pack 1 (SP1) and Cumulative Update 2, or SQL Server 2005 with SP3 and Cumulative Update 3.

Question: 74

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains two servers. The servers are configured as shown in the following table.

You need to add an additional server to the farm. The new server will host the following service applications:

User Profile Service

Excel Calculation Services

Managed Metadata Web Service

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Question: 75

You host a SharePoint Server 2010 Service Pack 1 (SP1) server farm for multiple tenants. The Enterprise license is activated for the farm. You plan to deploy a web application that will contain two site collections named Collection1 and Collection2. You need to ensure that all of the Enterprise features can be enabled in Collection1. The solution must ensure that only the features of Microsoft SharePoint Foundation can be enabled in Collection2. What should you do?

- A. Implement document sets.
- B. Manage the web application features.
- C. Manage the site collection features.
- D. Implement feature packs.

Answer: D

Question: 76

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains two servers. The servers are configured as shown in the following table.

You plan to generate reports by using SQL Server Reporting Services. The report definitions will be stored in SharePoint lists. You need to recommend a deployment strategy. What should you recommend? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Question: 77

You are planning the search infrastructure for your company.
You need to recommend a search solution to meet the following requirements:
Users must be able to preview the documents returned in search results.
Users must be able to refine search results by using custom properties.
Users must be able to search the content of PDF files.
The solution must be able to index 1 million documents.
The solution must minimize upfront software costs.
What should you include in the recommendation?

- A. Microsoft SharePoint Online
- B. Microsoft FAST Search Server 2010 for SharePoint
- C. Microsoft SharePoint Foundation 2010 Service Pack 1 (SP1)
- D. Microsoft SharePoint Server 2010 Service Pack 1 (SP1)

Answer: B

Explanation:

Preview documents = fast

Question: 78

DRAG DROP

You plan to deploy two SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1 and Farm2.

Farm1 will host shared services.

Farm2 will host content.

You need to ensure that Farm2 can use the services in Farm1.

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Question: 79

**DRAG DROP**

You are designing a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

Corporate security policy states that only required ports must be open on servers.

You need to identify which communication ports must be open for the following operations:

Crawling SMB file shares

Accessing data from Microsoft SQL Server content databases

Communicating between front-end Web servers and application servers

Which ports should you identify?

To answer, drag the appropriate port to the correct operation in the answer area.

Answer:

Question: 80

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm. You plan to deploy a sandbox solution in a production environment. You need to identify the highest degree of isolation. What should you do? (Choose the best answer.)

- A. Use local load balancing and run sandboxed solutions only on specific servers.
- B. Use remote load balancing and run sandboxed solutions only on specific servers.
- C. Use local load balancing and dedicate a separate server to run sandboxed solutions.
- D. Use remote load balancing and dedicate a separate server to run sandboxed solutions.

Answer: D

Question: 81

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users. The farm uses Active Directory for authentication. The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

- WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.
- WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

The marketing department plans to upload large video files to the sites in WebApp2.

You need to recommend a solution to minimize the size of the content databases for WebApp2.

What should you include in the recommendation?

- A. an ASP.NET Membership Database
- B. Microsoft Visual Studio 2010
- C. a BLOB cache
- D. Active Directory Federation Services (AD FS)
- E. service application groups
- F. the Secure Store Service service application
- G. user policies
- H. cross-firewall access zones
- I. SharePoint Health Analyzer
- J. Network Access Protection (NAP)
- K. alternate access mappings
- L. Information Rights Management (IRM)
- M. managed accounts
- N. the Access Services service application
- O. Network Load Balancing (NLB)
- P. Remote BLOB Storage (RBS)

Answer: P

Question: 82

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.

WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content. You plan to create a PerformancePoint dashboard in WebApp1. The dashboard will retrieve data from a SharePoint Online site.

You need to recommend a solution to ensure that the data is always retrieved from SharePoint Online by using an account named service@contoso.onmicrosoft.com. The solution must minimize the amount of custom development.

What should you include in the recommendation?

- A. Remote BLOB Storage (RBS)
- B. cross-firewall access zones
- C. Network Access Protection (NAP)
- D. Network Load Balancing (NLB)
- E. the Access Services service application
- F. a BLOB cache

Create a search component in the farm.

Install a single application server that has all service components.

Install 64-bit SharePoint 2010 in a Microsoft SQL Server 2008 cluster.

Install 64-bit SharePoint 2010 in Farm mode by mirroring the configuration database.

Install SharePoint Server 2010 Service Pack 1 (SP1) Standard on all intended servers in the farm by using the /Complete farm option.

Install SharePoint Server 2010 Service Pack 1 (SP1) Enterprise on all intended servers in the farm by using the /Complete farm option.

Set up the farm to include the following components:

- A single application server that has all service components except search
- A connection to a database server that contains Search database
- A second database server that contains the SharePoint Central Administration database

J. ACTIVE DIRECTORY FEDERATION SERVICES (AD FS)

- K. Information Rights Management (IRM)
- L. SharePoint Health Analyzer
- M. alternate access mappings
- N. Microsoft Visual Studio 2010
- O. managed accounts
- P. an ASP.NET Membership Database

Answer: H

Question: 83

DRAG DROP

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm.

You are configuring Microsoft Excel Services and Microsoft Visio Graphics Services that will access a search application from another farm.

You need to ensure that the following requirements are met:

High availability of the server

Maximum response time

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Question: 84

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm.

You need to implement an enterprise search technology that meets the following requirements:

Allows users to search people and their expertise.

Crawls content outside the SharePoint.

Provides metadata-driven refinement in the top results.

Provides phonetic searches.

Provides thumbnails and previews for documents.

Which search technology should you use? (Choose the best answer.)

- A. Search Server 2010 Express
- B. SharePoint Server 2010 Search
- C. User Profile Service
- D. FAST Search Server 2010 for SharePoint

Answer: D

Question: 85

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm that hosts intranet sites for internal users.

The farm uses Active Directory for authentication.

The farm contains two web applications named WebApp1 and WebApp2 that have the following configurations:

WebApp1 is used by the finance department and uses the URL <http://finance.contoso.com>.

WebApp2 is used by the marketing department and uses the URL <http://marketing.contoso.com>.

You have a Microsoft SharePoint Online environment. External users use the environment to access content.

Corporate security policy states that the password of each user account must be changed every three months.

You need to recommend a technology to ensure that the internal farm remains operational after the passwords change.

What should you include in the recommendation?

Actions

Decommission WFE1.

Upgrade SQL1 to SQL Server 2008 R2.

Install SharePoint Server 2010 SP1 on SQL1.

Upgrade APP1, WFE1, and WFE2 to SharePoint Server 2010 SP1.

Install SharePoint Server 2007 Service Pack 2 (SP2) on APP1, WFE1, and WFE2.

Answer Area

- A. Microsoft Visual Studio 2010
- B. the Access Services service application
- C. the Secure Store Service service application
- D. a BLOB cache
- E. Network Load Balancing (NLB)
- F. Information Rights Management (IRM)
- G. managed accounts
- H. SharePoint Health Analyzer
- I. Remote BLOB Storage (RBS)
- J. alternate access mappings
- K. Network Access Protection (NAP)
- L. Active Directory Federation Services (AD FS)
- M. service application groups
- N. an ASP.NET Membership Database
- O. cross-firewall access zones
- P. user policies

Answer: G

Question: 86

DRAG DROP

You have a SharePoint Server 2007 server farm that contains four servers. The servers are configured as shown in the following table.

You need to recommend which steps are required to upgrade the farm to SharePoint Server 2010 SP1. Which steps should you recommend?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Answer Area	Answer Area
Web application(s)	[2]
Site collection(s)	[2]

Description: HFE1
Install SharePoint Server 2007 Service Pack 2 (SP2) on APP1, WFE1, and WFE2.

Upgrade SQL1 to SQL Server 2008 R2.

Upgrade APP1, WFE1, and WFE2 to SharePoint Server 2010 SP1.

Question: 87

HOTSPOT

You are planning the taxonomy of a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You identify the following requirements:

The legal department will require a list view threshold of 1,000 items.

The accounting department will require a list view threshold of 2,000 items.

The manufacturing department will require a list view threshold of 1,000 items.

You need to identify the minimum number of web applications and site collections that must be created to meet the requirements.

How many web applications and site collections should you identify?

To answer, configure the appropriate number of web applications and site collections in the answer area.

Answer:

Question: 88

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a site collection named Collection1. Collection1 contains a content type named CT1.

You need to recommend a content management strategy to meet the following requirements:

Automatically route documents that use CT1 to a document library named Legal.

Prevent users from printing documents in the Legal document library.

What should you include in the recommendation?

To answer, drag the appropriate component to the correct requirement in the answer area.

Answer:

Question: 89

DRAG DROP

You are planning a recovery strategy for a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You identify the following recovery scenarios:

A list item that a user deleted eight days ago must be recoverable.

A document library that a user deleted 15 days ago must be recoverable.

You need to recommend which component must be used for each recovery scenario. The solution must recover the data in the minimum amount of time.

What should you recommend?

To answer, drag the appropriate component to the correct recovery scenario in the answer area.

Answer:

Question: 90

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You create a custom site column named SCI.

Users are allowed to enter any value in SCI.

You need to modify the search infrastructure to meet the following requirements:

Users must be able to perform a search that only returns results from content that is contained in a specific shared folder.

Users must be able to search for items that have a specific value in SCI.

You need to recommend which SharePoint technology must be implemented to meet the requirements.

What should you recommend?

To answer, drag the appropriate technology to the correct requirement in the answer area.

Answer:

Question: 91

DRAG DROP

You are evaluating the use of Microsoft SharePoint Online and SharePoint Server 2010 Service Pack 1 (SP1) for four companies. Each company estimates the maximum amount of content it will host on SharePoint, as shown in the following table.

You need to identify the appropriate SharePoint environment for each company. The solution must use SharePoint Online whenever possible.

Which environment should you identify for each company?

To answer, drag the appropriate environment to the correct company in the answer area.

Answer:

Question: 92

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains an Excel Services service application.

You plan to display a Microsoft Excel file in a Web Part. The Excel file will be stored on a file server and will contain custom calculations written in Microsoft Visual Studio.

You need to identify which Excel Services configuration must be configured to display the Excel file.

What should you configure?

To answer, drag the appropriate configuration to the correct location in the answer area.

Answer:

Question: 93

Answer Area	
Farm name	Number of servers
Farm1	2 <input type="text"/>
Farm2	4 <input type="text"/>
Farm3	4 <input type="text"/>

HOTSPOT

Your company plans to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1, Farm2, and Farm3.

During the initial planning phase, you identify the following high-level requirements for each farm:

Farm1 will host shared service applications.

Farm2 will host content for the human resources department. The farm content will be searchable.

Farm3 will host content for all users. The users will be able to open Microsoft Word documents stored in the farm directly from a web browser.

You identify the following deployment requirements:

Server virtualization will not be used.

Farm1 must host service applications whenever possible.

The service applications must not run on servers that host webpages for end users.

The users must be able to access all services and all content in all of the farms if a single server fails.

You need to identify the minimum number of SharePoint servers required for each farm. How many servers should you identify?

To answer, configure the appropriate number of servers for each farm in the answer area.

Answer:

Question: 94

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You need to recommend which tools must be used to recover deleted pages, deleted document libraries, and deleted permission levels. The solution must use the minimum amount of administrative effort.

Which tool should you use for each type of content?

To answer, drag the appropriate tool to the correct recovery task in the answer area.

Answer:

Question: 95

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a site collection named Collection1. You need to recommend a strategy to remove the draft versions from documents that were not modified for six months. What should you include in the recommendation?

- A. Word Automation Services
- B. Site quotas and locks
- C. Item scheduling
- D. Site collection policies

Answer: D

Question: 96

DRAG DROP

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm. You need to deploy a custom site to the top site of a site collection on the production farm. What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Question: 97

You are planning a SharePoint Server 2010 Service Pack 1 (SP1) server farm. You need to recommend which editions of Microsoft SQL Server 2008 R2 must be deployed to support online index rebuilding. Which editions should you recommend? (Each correct answer presents a complete solution. Choose all that apply.)

- A. Workgroup
- B. Standard
- C. Enterprise
- D. Datacenter
- E. Web

Answer: C,D

Question: 98

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains three servers named WFE1, WFE2, and APP1.

User requests are load balanced by using a hardware load balancer.

The farm contains a Business Data Connectivity Service service application. The service application is configured to run on APP1.

You plan to add a new server named APP2 to the farm.

You need to ensure that all requests to the Business Data Connectivity Service service application are load balanced between APP1 and APP2.

What should you do?

- A. Create a new Business Data Connectivity Service service application.
- B. Install Network Load Balancing (NLB) on APP2.
- C. Publish the Business Data Connectivity Service service application.
- D. Start the Business Data Connectivity Service service application on APP2.
- E. Add APP1 and APP2 to the hardware load balancer.

Answer: D

Actions	Answer Area
On Farm1, extend the web application.	On Farm1, create a Managed Metadata Service service application.
On Farm2, create a data connection file.	On Farm1, publish the service application.
	On Farm2, connect to the service application.
	On Farm1, create a Business Data Connectivity Service service application.
	On Farm1, create a Business Data Connectivity Service service application.

Question: 99

You have a SharePoint Server 2010 Service Pack 1 (SP1) deployment. You need to write a report that uses Microsoft SQL Server Reporting Services to monitor feature usage. The solution must minimize the amount of development effort. Which data source should you use?

- A. the Unified Logging Service (ULS)
- B. the logging database
- C. Internet Information Services (IIS) logs
- D. Event Viewer

Answer: A

Question: 100**DRAG DROP**

You have two SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1 and Farm2.

You plan to implement a hierarchical classification for the two farms.

You need to recommend a solution to meet the following requirements:

All classifications must be created and managed in Farm1.

Farm2 must be able to consume the classifications in Farm1.

What should you recommend?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Question: 101

DRAG DROP

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm. The farm topology is as shown in the following table.

You want to improve the performance of the search.

You need to add an Application Server.

Which component should you place on each of the three servers? (To answer, drag the appropriate server or server to the correct location or locations in the answer area.)

Answer:

Question: 102

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains 10 front-end Web servers that have the query server role installed.

You plan to index 15 million items.

You need to recommend a solution to decrease the relevance of search results that are indexed from a specific site.

What should you include in the recommendation?

- A. crawler impact rules
- B. authoritative pages
- C. server name mappings
- D. crawl rules

Answer: B

Question: 103

You plan to deploy a SharePoint Server 2010 Service Pack1 (SP1) server farm. The network has Microsoft System Center Operations Manager 2012 installed. You need to ensure that Operations Manager can monitor availability of the SharePoint service applications. What should you recommended deploying?

- A. a management pack
- B. a Web Part pack
- C. a feature pack
- D. a solution package

Answer: A

Question: 104

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains five front-end Web servers. Users access the farm 24 hours a day. You plan to perform routine maintenance on all of the front-end Web servers. You need to identify the time of day when the fewest number of users are connected to the farm. What should you use?

- A. PerformancePoint Services
- B. Web Analytics reports
- C. Resource Monitor
- D. site quotas and locks

Answer: B

Question: 105

You have a SharePoint Server 2007 Service Pack 3 (SP3) server farm. You plan to migrate the farm to SharePoint Server 2010 Service Pack 1 (SP1) by using the database attach method. You need to identify which components must be reconfigured manually after the content databases are migrated. Which components should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

- A. outgoing email settings
- B. Web Parts that contain custom code
- C. permission policies for the web applications
- D. site collection permissions
- E. approval workflows

Permission Levels		Answer Area
Contribute		Group1 Permission level
Full Control		Group2 Design
Restricted Read		
Read		
View Only		

Answer: B,C,E

Question: 106

DRAG DROP

You plan to deploy SharePoint Server 2010 Service Pack 1 (SP1) for the human resources department.

You plan to create two SharePoint groups named Group1 and Group2.

The groups must have the following permissions:

Users in Group1 must be able to view pages and documents, but must be prevented from viewing the historical versions of pages and documents and the permissions of users.

Users in Group2 must be able to view, to add, to update, to delete, to approve, and to add columns in lists.

You need to identify the permission level required for each group. The solution must minimize the number of permissions assigned to each group.

Which permission levels should you identify? To answer, drag the appropriate permission level to the correct group in the answer area.

Answer:

Question: 107

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You plan to display information from a line-of-business application named APP1 in a Web Part.

APP1 uses an internal database for authentication. Users authenticate to APP1 by using a user name and a password.

You need to implement single sign-on between SharePoint and APP1.

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Question: 108

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains two servers. The servers are configured as shown in the following table.

You install Windows Server 2008 R2 on a new server named Server3.

You need to add Server3 to the farm and enable the following service applications in the farm:

Visio Graphics Service

Word Automation Services

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Question: 109

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a database server that runs Microsoft SQL Server 2008 R2. You need to ensure that users can access SharePoint sites in the event of a SQL Server storage failure. Which SQL Server technology should you implement?

- A. Database mirroring
- B. Merge replication
- C. Failover Clustering
- D. Transactional replication
- E. Snapshot replication

Answer: A

Question: 110

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains 10 front-end Web servers that have the query server role installed. You plan to index 15 million items. You need to recommend a solution to minimize the amount of time it takes to return search results to end users. What should you include in the recommendation?

- A. crawl rules
- B. index partitioning
- C. authoritative pages
- D. crawler impact rules

Answer: B

Question: 111

You plan to deploy a PerformancePoint dashboard that will display data from a cube hosted in Microsoft SQL Server Analysis Services.

The following identities are used by services and application pools:

The Claims to Windows Token Service process identity is contoso\C2WTS.

The PerformancePoint application pool identity is contoso\SPPPS.

The Secure Store application pool identity is contoso\SPSSS.

The SQL Server Analysis Service identity is contoso\SQLAS.

You need to ensure that when a user connects to the dashboard, the user's credentials are used to connect to the cube. Which identities should you enable for Kerberos constrained delegation? (Each correct answer presents part of the solution. Choose all that apply.)

- A. contoso\C2WTS
- B. contoso\SPPPS
- C. contoso\SPSSS
- D. contoso\SQLAS

Answer: A,B,D

Explanation:

The Kerberos protocol supports two kinds of delegation, basic (unconstrained) and constrained.

Basic Kerberos delegation can cross domain boundaries in a single forest, but cannot cross a forest boundary regardless of trust relationship.

Kerberos constrained delegation cannot cross domain or forest boundaries in any scenario.

The account you use for C2WTS also needs to be configured for Constrained Delegation with Protocol Transitioning and needs permissions to delegate to the Services it is required to communicate with (i.e. SQL Server Engine, SQL Server Analysis Services).

The following service applications and products require the C2WTS and Kerberos constrained delegation:

Excel Services

PerformancePoint Services

Visio Services

The following service applications and products are not affected by these requirements, and therefore can use basic delegation, if it is required:

Business Data Connectivity service and Microsoft Business Connectivity Services

InfoPath Forms Services

Access Services

Microsoft SQL Server Reporting Services (SSRS)

Microsoft Project Server 2010

The following service application does not allow delegation of client credentials and therefore is not affected by these requirements:

Microsoft SQL Server PowerPivot for Microsoft SharePoint

Question: 112

Your company uses Microsoft SharePoint Online.

You deploy a custom site template named SiteTemplate1 and a custom page layout named

PageLayout1.

You need to recommend a configuration to ensure that the finance department can only create sites that use

SiteTemplate1 and pages that use PageLayout1.
What should you include in the recommendation?

- A. sites and workspaces
- B. page layouts and site templates
- C. master pages and page layouts
- D. site collection policies

Answer: B

Question: 113

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm.
A user named User1 is the site collection administrator for a site collection named Collection1.
User1 plans to use site templates to recreate sites that will be used for testing. The new sites will be configured identically to their original site.
You need to recommend which configurations User1 must change manually after creating a site by using the site templates.
Which configurations should recommend?

- A. custom content types
- B. permissions
- C. document versions
- D. custom columns

Answer: B

Question: 114

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains several web applications. You need to recommend a strategy to monitor the memory usage and the CPU usage of the web applications. Which process should you recommend monitoring?

- A. w3wp.exe
- B. wssadmin.exe
- C. spucworkerprocess.exe
- D. spuchostservice.exe

Answer: A

Question: 115

You plan to deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm will contain a site. Internal users and external partners will access the site.
You plan to implement SSL for all web applications.
You need to recommend from where to obtain certificates for the planned deployment. The solution must meet the following requirements:
Minimize the amount of administrative effort required to deploy the certificates to end users.
Minimize the number of error messages that the end users receive when they connect to SharePoint sites.

- A. certificates issued by a third-party certification authority (CA)
- B. self-signed certificates
- C. certificates issued by an internal enterprise certification authority (CA)
- D. certificates issued by an internal standalone certification authority (CA)

Answer: A

Question: 116

DRAG DROP

You are the administrator for a company named Fabrikam, Inc. Fabrikam has an Active Directory forest named fabrikam.com. The forest contains a SharePoint Server 2010 Service Pack 1 (SP1) server farm. Fabrikam plans to grant users from a company named Contoso, Ltd., access to a web application in the farm. Contoso has an Active Directory forest named contoso.com. All of the users at Contoso have user accounts in contoso.com. You need to recommend which configurations must be performed to grant Contoso users access to the web application. What should you recommend?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Question: 117

Actions

Answer Area

Create a Service Principal Name (SPN).
Implement delegation.
Modify the IIS Authentication Settings of the web application.

In the PerformancePoint Services service application settings, configure the Secure Store and Unattended Service Account settings.

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. You need to recommend a solution to prevent users from printing confidential documents that are stored in SharePoint sites. The solution must not prevent the users from accessing SharePoint content. What should you include in the recommendation?

- A. Active Directory Federation Services (AD FS)
- B. The Secure Store Service service application
- C. Active Directory Rights Management Services (AD RMS)
- D. the security token service

Answer: C

Question: 118

DRAG DROP

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a PerformancePoint Services service application. You need to configure the PerformancePoint Services service application to use Kerberos authentication.

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Question: 119

You plan to deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm. Product information is stored in an external Microsoft SQL Server database. The SQL Server database is configured to use Active Directory for authentication. You need to recommend which service is required to display all of the product information on a single webpage. The solution must prevent users from being prompted for authentication multiple times. Which service should you implement?

Stop the Sandboxed Code Service on WFE-01 and WFE-02.
Stop the Sandboxed Code Service on WFE-03.
Start the Sandboxed Code Service on WFE-01 and WFE-02.
Start the Sandboxed Code Service on WFE-01 and QRY-01.
Select the All sandboxed code runs on the same machine as a request option for WFE-01 and QRY-01.
Select the Load balancing Requests to run sandboxed code are routed by solution affinity option for WFE-01 and WFE-02.

- A. Application Registry Service
- B. Business Connectivity Services
- C. Managed Metadata Service
- D. Access Services

Answer: B

Question: 120

DRAG DROP

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm that has the following topology:

You need to implement a load-balancing scheme for sandbox solutions to meet the following requirements:

Provide the maximum level of isolation to run sandboxed solutions.

Provide the highest level of scalability that is not limited by the resources on a single server.

Run sandbox solutions on the server based on solution affinity.

What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer:

Actions

- From Farm2, add a content deployment job.
- From Farm2, modify the content deployment settings.
- From Farm2, add a content deployment path.
- From Farm2, modify the content deployment settings.

Answer Area

- From Farm2, modify the content deployment settings.
- From Farm2, add a content deployment path.
- From Farm1, add a content deployment job.

Question: 121**DRAG DROP**

You have two SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1 and Farm2.

Farm1 is used for content authoring.

Farm2 is used for publishing.

You need to deploy content automatically from Farm1 to Farm2.

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:**Question: 122**

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. Several farm solutions are deployed to the farm. You need to recommend a strategy to back up the solutions that are deployed to the farm. Which cmdlet should you

include in the recommendation?

- A. Backup-SPConfigurationDatabase
- B. Backup-SPWeb
- C. Backup-SPFarm
- D. Backup-SPContentDatabase

Answer: C

Question: 123

You plan to deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You need to recommend a solution for My Site to meet the following requirements:

The My Site sites of users in the sales department must have URLs that start with
http://sales.contoso.com/users.

All other My Site sites must have URLs that start with http://intranet.contoso.com/mysites.

What should you include in the recommendation?

- A. Two User Profile Service service applications and two managed paths
- B. Two User Profile Service service applications and one managed path
- C. One User Profile Service service application and one managed path
- D. One User Profile Service service application and two managed paths

Answer: A

Question: 124

Your company plans to deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You are designing a maintenance strategy for the farm.

You plan to apply critical Windows updates to the servers in the farm once a month.

You need to recommend a strategy to ensure that the installation of Windows updates will not prevent users from searching for content in SharePoint sites.

What should you include in the recommendation?

- A. multiple crawl databases
- B. multiple host distribution rules
- C. multiple query servers
- D. multiple Search service applications

Answer: D

Question: 125

Your company uses Microsoft SharePoint Online.

You have a private site collection named Site1.

You need to provide anonymous access to several documents and webpages. The solution must use the minimum amount of administrative effort.

What should you do?

SharePoint Version	Feature
SharePoint Server 2010 Service Pack 1 (SP1) Foundation	Document Libraries Pack 1 (SP1) Foundation
SharePoint Server 2010 Service Pack 1 (SP1) Standard	Unique Document IDs Pack 1 (SP1) Standard
SharePoint Server 2010 Service Pack 1 (SP1) Enterprise	Document Sets Pack 1 (SP1) Standard
	Context Types Pack 1 (SP1) Standard
	Voice Services Pack 1 (SP1) Foundation
	SharePoint Server 2010 Service Pack 1 (SP1) Enterprise

- A. Create a permission policy.
- B. Modify the user permission of the Site1 web application.
- C. Modify the anonymous policy of the Site1 web application.
- D. Create a public website site collection.

Answer: D

Explanation:

It's possible to grant access on an existing site collection to external users, but those will always be authenticated. You cannot change an existing private collection to become public.

Question: 126

DRAG DROP

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm. You plan to acquire SharePoint Server 2010 Service Pack 1 (SP1) licenses. Which features are included in each version of SharePoint? (To answer, drag the appropriate version or versions to the correct location or locations in the answer area.)

Answer:

Question: 127

You are the administrator for a SharePoint Server 2010 Service Pack 1 (SP1) farm that spans the corporate network and perimeter network. Your company network contains Active Directory accounts for employees in the corporate

Technologies	Answer Area
The Access Services service application	Users must be able to connect to the portal by using a Windows Live ID.
	Claims-based authentication

When any user accesses a PerformancePoint dashboard, PerformancePoint data must be retrieved by using a single user account.

The Secure Store Service service application

network. The network also includes separate Active Directory accounts for vendors in the perimeter network. You want to prevent the perimeter network from accessing the accounts of employees. You need to design the extranet farm topology. Which type of topology should you use? (Choose the best answer.)

- A. Consolidate the perimeter network and corporate network to use a single Active Directory infrastructure.
- B. Configure a one-way domain trust where the perimeter network trusts the corporate network.
- C. Configure a one-way domain trust where the corporate network trusts the perimeter network.
- D. Configure a two-way domain trust.

Answer: B

Question: 128

DRAG DROP

You plan to deploy a business intelligence portal on a server that has SharePoint Server 2010 Service Pack 1 (SP1) installed.

You identify the following requirements for the planned deployment:

Users must be able to connect to the portal by using a Windows Live ID.

When any user accesses a PerformancePoint dashboard, PerformancePoint data must be retrieved by using a single user account.

You need to identify which technologies are required to meet the requirements.

Which technologies should you identify?

To answer, drag the appropriate technology to the correct requirement in the answer area.

Answer:

Question: 129

DRAG DROP

You plan to deploy three SharePoint Server 2010 Service Pack 1 (SP1) server farms named Farm1, Farm2, and Farm3.

You identify the following requirements for each farm:

Farm1 will be dedicated to hosting shared services for users located in Asia and Africa.

Farm2 will host content and sites for users located in Asia.

Farm3 will host content and sites for users located in Africa.

You plan to deploy the following service applications for all of the users:

Access Services

Managed Metadata Service

Business Data Connectivity Service

You need to recommend to which farm each service application must be deployed. The solution must minimize the number of service applications deployed to each farm. Any services that can be shared must be deployed to Farm1.

Which service applications should you recommend?

To answer, drag the appropriate service application to the correct farm or farms in the answer area.

Answer:

Question: 130

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. You need to recommend a solution to convert a Microsoft Word document that has the .doc extension to a file that has the .docx extension. What should you include in the recommendation?

- A. the Document Conversions Launcher Service
- B. the Word Automation Services service application
- C. the Application Registry Service service application
- D. the Word Viewing service

Answer: B

Question: 131

Actions

- Upgrade SQL1 to SQL Server 2008 R2.
- Deploy a SharePoint Server 2007 Service Pack 2 (SP2) server farm.
- Perform a database attached upgrade of the content database to SharePoint Server 2007 Service Pack 2 (SP2).
- Deploy a SharePoint Server 2010 SP1 server farm.
- Perform a database attached upgrade of the content database to SharePoint Server 2010 SP1.

Answer Area

You have a Microsoft SharePoint Portal Server 2003 Service Pack 3 (SP3) server farm. The farm uses a database server named SQL1, SQL1 runs the 32-bit version of Windows Server 2003 R2 and has Microsoft SQL Server 2005 SP3 installed. You need to recommend which steps are required to upgrade the farm to SharePoint Server 2010 Service Pack1 (SP1).

What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation/Reference:

Since the SQL Server machine cannot be used for 2010 (32 bit is supported for 2007, but not 2010), upgrading it is pointless. Therefore, the first two answers are bogus. Upgrading 2003 to 2010 directly isn't supported, so the right sequence should be:

- Deploy a SharePoint 2007 Service Pack 2 (SP2) server farm.
- Perform a database attached upgrade of the content databases to SharePoint Server 2007 Service Pack 2 (SP2).
- Deploy a SharePoint 2010 Service Pack 1 (SP1) server farm.
- Perform a database attached upgrade of the content databases to SharePoint Server 2010 SP1.

Question: 132

DRAG DROP

You have a Microsoft SharePoint Foundation 2010 Service Pack 1 (SP1) server farm named Farm1. Farm1 contains a web application named Web1. You deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm named Farm2. You need to move Web1 to Farm2. What should you do?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Question: 133

Your company uses SharePoint Server 2010 Service Pack 1 (SP1). You need to recommend a solution to track user access to data in a document library. What should you include in the recommendation?

- A. administrative reports
- B. user policies
- C. Web Analytics
- D. auditing

Answer: D

Question: 134

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a web application. The web application contains several sites in individual content databases. You are planning the maintenance strategies for the content databases. You need to plan a strategy to release unused space from the databases. Which tool should you use?

- A. Storage Explorer
- B. Windows System Resource Manager (WSRM)

- C. SharePoint Health Analyzer
- D. Resource Monitor

Answer: B

Question: 135

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains four front-end Web servers, two application servers, and a Microsoft SQL Server failover cluster. You plan to deploy an enterprise monitoring solution for the farm. You need to recommend a monitoring strategy to meet the following requirements:

Generate reports that contain hardware utilization data.

Generate alerts if specific URLs are unavailable.

Provide a logical layout of the farm topology.

Minimize cost.

What should you include in the recommendation?

- A. Microsoft System Center Configuration Manager 2007 R3
- B. the Unified Logging Service (ULS)
- C. Performance Monitor
- D. Microsoft System Center Operations Manager 2007 R2

Answer: D

Question: 136

You plan to deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm.

You need to recommend a solution for My Site to meet the following requirements:

The My Sites of users in the sales department must have URLs that start with

http://sales.contoso.com/users.

All other My sites must have URLs that start with http://intranet.contoso.com/mysites.

What should you include in the recommendation?

- A. one User Profile service application and two managed paths
- B. two User Profile service application and two managed paths
- C. two User Profile service application and two managed paths
- D. one User Profile service application and one managed paths

Answer: B

Explanation:

MySite URL is a setting on user profile SA level, so setting two URLs will require two service applications. And because both URLs will also require a managed path to deploy the sites to, you need two of those.

Question: 137

You have a SharePoint Server 2010 Service Pack 1 (SP1) server farm. Several farm solutions are deployed to the farm. You need to recommend a strategy to back up the solution that are deployed to the farm. Which cmdlet should you include in the recommendation?

Permission Levels	Answer Area
Contribute	Group1 Permission level
Design	Group2 Permission level
Full Control	
Restricted Read	
Read	
View Only	

- A. Backup-SPContentDatabase
- B. Backup-SPFarm
- C. Backup-SPWeb
- D. Backup-SPConfigurationDatabase

Answer: B

Question: 138

You have a SharePoint Server 2007 Service Pack 3 (SP3) server farm. You plan to migrate the farm to SharePoint Server 2010 Service Pack 1 (SP1) by using the database attach method. You need to identify which components must be reconfigured manually after the content database are migrated. Which components should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

- A. approval workflows
- B. permission policies for the web applications
- C. Web Parts that contain custom code
- D. outgoing email settings
- E. site collection permissions

Answer: A,B,C,D

Question: 139

DRAG DROP

You plan to deploy SharePoint Server 2010 Service Pack 1 (SP1) for the human resource department.

You plan to create two SharePoint groups named Group 1 and Group 2.

The groups must have the following permissions:

Users in Group 1 must be able to view pages and documents, but must be prevented from viewing historical versions of pages and documents and permissions of users.

Users in Group 2 must be able to view pages and list items, and to download documents.

You need to identify the permission level required for each group. The solution must minimize the number of permissions assigned to each group.

Which permission levels should you identify?

To answer, drag the appropriate permission level to the correct group in the answer area.

Select and Place:

Answer:

Solution Types	Answer Area
Farm solution User solution	Solution1 Farm solution Solution2 User solution Solution3 User solution
View Only	

Question: 140**DRAG DROP**

Your company is evaluating the development of three custom SharePoint solutions named Solution1, Solution2 and Solution3.

You identify the following requirements for the custom solutions:

Solution1 will retrieve information from a Microsoft SQL Server database.

Solution2 will aggregate information from multiple site collections.

Solution3 will retrieve data from multiple lists in a site. Solution3 must be load balanced between all frontend Web servers.

You need to recommend which type of solution must be used for each custom solution.

Which type of solutions should you recommend?

To answer, drag the appropriate solution type to the correct custom solution in the answer area.

Select and Place:

Answer:

Question: 141

DRAG DROP

You identify the following deployment requirements:

Users in the human resource department must be able to manage their user profile and to view Microsoft Excel files by using a web browser.

Users in the finance department must be able to search for finance content, to manage their user profile and to view Microsoft Viso web drawings in a web browser.

You need to identify which service application or service applications must be deployed to each farm. Any services that can be shared must be deployed to Farm1.

Which service applications should you identify?

To answer, drag the appropriate service application or service applications to the correct farm in the answer area.

Answer:

Case Study: 1

Northwind Traders

Active Directory Configurations

Northwind Traders has the following Active Directory configurations:

User attributes are stored in Active Directory.

Active Directory group membership is based on the company's departments.

Business Requirements

Northwind Traders has the following business requirements for the planned SharePoint Server 2010 deployment:

Custom workflows must be reused across multiple document libraries.

Human resources content must always have the highest relevancy in search results. Users who have no development experience must be able to create custom workflows.

The initial deployment must contain 500GB of data and must support as much as 5 terabytes of content.

Technical Requirements

Northwind Traders has the following technical requirements for the planned SharePoint Server 2010 deployment:

Databases must not exceed 100GB.

SharePoint Server 2010 processes must be evenly distributed across the servers in the server farm.

All changes to the user profile attributes in My Sites must be updated automatically in Active Directory.

To support backup and restore procedures, all databases must be created during the implementation phase of SharePoint Server 2010.

Security Requirements

Northwmd Traders has the following security requirements for the planned SharePoint Server 2010 deployment:

All users in the same department must share the same level of access to site content.

Users in the human resources department must be prevented from browsing accounting department documents.

User Requirements

Northwind Traders has the following user requirements for the planned SharePoint Server 2010 deployment:

All customizations must be authored by a single team of developers.

All customizations must be deployed by the site collection administrators.

Question: 1

You are a SharePoint administrator for Northwind Traders. The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration. You need to recommend a solution that provides users with the ability to update their user attributes in Active Directory. What should you recommend?

- A. a User Profile Service Application
- B. Active Directory Federation Services (AD FS)
- C. Business Connectivity Services
- D. Active Directory Rights Management Services (AD RMS)

Answer: A

Question: 2

You are a SharePoint administrator for Northwind Traders. The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration. You need to identify the minimum number of content databases required for the planned SharePoint Server 2010 deployment. How many content databases should you identify?

- A. 50
- B. 1
- C. 11
- D. 5

Answer: A

Explanation:

$$5 \text{ terabytes } 5000/100 = 50 \text{ DB}$$

Question: 3

You are a SharePoint administrator for Northwind Traders. The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration. You need to recommend a search solution that meets the company's business requirements. What should you include in the solution?

- A. authoritative pages
- B. search scopes
- C. federated locations
- D. host distribution rules

Answer: A

Question: 4

You are a SharePoint administrator for Northwind Traders. The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 server farm for internal collaboration. You need to recommend a strategy to manage access to SharePoint content. You must achieve this goal by using the minimum amount of administrative effort. What should you recommend?

- A. Configure managed accounts.
- B. Implement Active Directory Lightweight Directory Services (AD LDS).
- C. Add Active Directory groups to the SharePoint groups.
- D. Create user policies and permission policies for the Web application.

Answer: C

Question: 5

The company has 20,000 employees distributed across 11 different departments. You plan to implement a SharePoint Server 2010 Service Pack 1 (SP1) server farm for internal collaboration. You need to recommend a deployment solution for the customizations that meets the company's user requirements. What should you include in the solution?

- A. content deployment
- B. farm solutions
- C. sandboxed solutions
- D. farm features

Answer: C

Case Study: 2

Litware Inc

Network Configurations

Litware has the following network configurations:

The main office contains multiple servers.

Litware has Microsoft System Center Data Protection Manager deployed.

The main office connects to the branch offices by using a slow WAN link.

The branch office contains a file server. The file server contains numerous files that are frequently updated.

The network contains an internal network and a perimeter network. The internal network and the perimeter network are separated by a firewall.

Search Requirements

Files stored on the file server in the branch office must be searchable by using SharePoint.

Updated content must be included in search results within four hours of being updated.

Monitoring Requirements

Litware must have a centralized monitoring solution. The solution must be able to monitor the server farm for configuration, security, and performance problems.

Compliance Requirements

Litware has the following compliance requirements for the planned SharePoint Server 2010 deployment:

Users must not be able to print confidential documents that are stored in SharePoint sites.

Site members must be able to recover all of the content that they have deleted from the SharePoint sites for as many as two years after the deletion.

Security Requirements

Litware has the following security requirements for the planned SharePoint Server 2010 deployment:

Only required TCP/IP ports must be opened on the firewall.

Access to the SharePoint sites via the Internet must use client Certificates authentication.

Users on the internal network must use Kerberos authentication to access the SharePoint sites. User authorization management must require the minimum amount of configuration and ongoing maintenance.

Question: 1

You are a SharePoint administrator for Litware, Inc. The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm. You need to design an authentication solution to provide users with access to the SharePoint sites from the Internet. What should you include in the solution?

- A. The Secure Store Service application
- B. Active Directory Rights Management Services (AD RMS)
- C. Active Directory Certificate Services (AD CS)
- D. The Access Services service application

Answer: C

Question: 2

You are a SharePoint administrator for Litware, Inc. The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm. You need to recommend a data recovery strategy that meets the company's compliance requirements. The strategy must use the minimum amount of administrative effort. What should you include in the strategy?

- A. Microsoft SQL Server differential backups
- B. SharePoint Recycle Bin
- C. SharePoint granular backups
- D. Microsoft SQL Server database snapshots

Answer: B

Question: 3

You are a SharePoint administrator for Litware, Inc. The company has a main office and a branch office. The company has 14,000 employees.

You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm. You are evaluating whether to implement a single server farm for the SharePoint Server 2010 deployment. You need to identify the minimum number of zones required for the single server farm. How many zones should you identify?

- A. 2
- B. 6
- C. 1
- D. 4

Answer: A

Question: 4

You are a SharePoint administrator for Litware, Inc. The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm. You need to recommend a solution to minimize the amount of resources required for indexing during business hours. What should you include in the solution?

- A. crawl rules
- B. crawler impact rules
- C. a host distribution rule
- D. search scopes

Answer: B

Question: 5

You are a SharePoint administrator for Litware, Inc. The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm. You need to recommend a solution that meets the company's compliance requirements. What should you include in the solution?

- A. Windows Server 2008 Security Compliance Management Toolkit
- B. Microsoft System Center Operations Manager
- C. Active Directory Federation Services (AD FS)
- D. Active Directory Rights Management Services (AD RMS)

Answer: D

Question: 6

You are a SharePoint administrator for Litware, Inc. The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 server farm. Employees of the company's business partners will require access to the SharePoint farm. You need to recommend a monitoring solution for the planned deployment of SharePoint Server 2010. Your solution must minimize costs. Which solution should you recommend?

- A. SharePoint Health Analyzer
- B. Performance Point Services
- C. Performance Monitor
- D. Microsoft System Center Configuration Manager

Answer: A

Question: 7

The company has a main office and a branch office. The company has 14,000 employees. You plan to deploy a SharePoint Server 2010 Service Pack 1 (SP1) server farm. Employees of the company's business partners will require access to the SharePoint farm. You need to identify which TCP port is required to provide users with access to the SharePoint sites from the Internet. Which TCP port should you identify?

- A. 445
- B. 443
- C. 1433
- D. 80

Answer: B

Case Study: 3

Contoso Ltd

Line of Business Applications

The company has a dedicated Microsoft SQL Server 2008 Analysis Services server. The server has five Online Analytical Processing (OLAP) cubes in an Analysis Services instance. The instance uses Windows authentication.

Intranet Requirements

Contoso has the following requirements for its intranet site:

The intranet site must include 10 sites, each of which corresponds to one of the company's 10 departments. Each departmental site must have its own database.

Numerous Microsoft InfoPath forms and PerformancePoint dashboards must be deployed to the

departmental sites. The dashboards must consume data from the OLAP cubes.

The site must support as many as 500 concurrent connections for InfoPath Forms Services.

Per-user identity authentication must be used for PerformancePoint Services.

My Sites must be created as a separate Web application.

My Sites must be available for all users.

Extranet Requirements

Contoso has the following requirements for its extranet site:

The extranet site must be able to host sites for secure collaboration between the employees of Contoso and the external users of the partner companies.

Partner company employees must be able to create secure collaboration sites and site collections easily.

Partner company employees must not have accounts in the Contoso Active Directory forest.

The extranet site must be created as a separate Web application.

Each site collection must have a 2-GB quota.

Public Site Requirements

Unauthenticated access to the public site must be available to anyone on the Internet.

Authenticated access to the public site must be available to Contoso employees who manage and maintain the site. The public site must be created as a separate Web application.

Question: 1

You are a SharePoint administrator for Contoso, Ltd. The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company. You need to identify the minimum number of site collections required for the planned deployment of SharePoint Server 2010. How many site collections should you identify?

- A. 3
- B. 10
- C. 13
- D. 1

Answer: C

Explanation:

$10 \text{ (Dept Sites)} + 1 \text{ (My Sites)} + 1 \text{ (Extranet for users of Contoso)} + 1 \text{ (Extranet for users of partner companies)} = 13$

Question: 2

You are a SharePoint administrator for Contoso, Ltd. The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company. You need to recommend a solution to prevent the extranet Web site from exceeding 200 GB . What should you recommend?

- A. Disable self-service site creation.
- B. Limit the number of site collections in the extranet content database.
- C. Implement a site collection policy.
- D. Implement resource throttling for the Web application.

Answer: B

Question: 3

You are a SharePoint administrator for Contoso, Ltd. The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company. You are evaluating whether to implement a single server farm that will contain the extranet Web site, the intranet Web site, and the public Website. You need to prevent partner company users from creating My Sites. What should you do?

- A. Delete the users from all of the SharePoint groups in the My Sites host application.
- B. Disable the User Profile Service.
- C. Disassociate the extranet application from the default user profile proxy.
- D. Store the User Profile database inside the perimeter network.

Answer: C

Question: 4

You are a SharePoint administrator for Contoso, Ltd. The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company. You need to recommend a solution to provide unauthenticated users with the ability to submit content to document libraries on the public Web site. What should you recommend?

- A. an e-mail-enabled document library
- B. a Content Organizer rule
- C. a new service connection
- D. an information management policy

Answer: A

Question: 5

You are a SharePoint administrator for Contoso, Ltd. The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company. You need to recommend a solution to grant partner company employees access to the extranet. What should you include in the solution?

- A. Forms-based authentication and Active Directory Lightweight Directory Services (AD LDS)
- B. Forms-based authentication and the Application Layer Gateway Service (ALG)
- C. Integrated Windows authentication and Active Directory Rights Management Services (AD RMS)
- D. Integrated Windows authentication and Active Directory Federation Services (AD FS)

Answer: A

Question: 6

Server	Server role
Server1	Web, query, index
Server2	Web, query, index
Server3	Microsoft SQL Server 2005

You are a SharePoint administrator for Contoso, Ltd. The company has 2,000 employees and 500 external users who work at the offices of various partner companies. You plan to deploy SharePoint Server 2010 to host an intranet Web site, an extranet Web site, and a public Web site for the company. During capacity testing, you discover that InfoPath user sessions are forcibly terminated, resulting in the loss of form data. You need to recommend a solution to support the required number of connections for InfoPath Forms Services. What should you recommend?

- A. Distribute InfoPath forms in multiple form libraries.
- B. Configure page output caching.
- C. Create a new Secure Store Service application.
- D. Add a State Service database.

Answer: D

Case Study: 4

Blue Yonder Airlines

SharePoint Server 2007 Configurations

The SharePoint Server 2007 server farm contains the servers configured as shown in the following table.

Server1 and Server2 are load balanced by using a hardware load balancer. The server farm has the following configurations:

Two Shared Services Providers

Two Web applications named Web1 and Web2

A 500-GB site collection in Web1

A 700-GB site collection in Web2

Microsoft Office PerformancePoint Server 2007 data and dashboards

To prepare for the upgrade, you delete 200 GB of text documents from Web1 and 400 GB of text documents from Web2.

Technical Requirements for Upgrade

Blue Yonder Airlines has the following technical requirements for the planned SharePoint Server 2010 deployment:

Users must be able to access upgraded and non-upgraded sites during the upgrade process.

All PerformancePoint data and dashboard information must be migrated to SharePoint Server 2010.

Security Requirements

All Web applications in the SharePoint Server 2010 server farm must support multiple authentication providers in a single zone.

User Requirements

Users must be able to access all documents during the upgrade process.

Question: 1

You are a SharePoint administrator for Blue Yonder Airlines. You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. You need to recommend a solution for migrating all PerformancePoint 2007 objects to SharePoint Server 2010. What should you include in the solution?

- A. The Import PerformancePoint Server 2007 Content wizard

- B. SharePoint Designer 2010
- C. The Import Application Definition File wizard
- D. PerformancePoint Dashboard Designer

Answer: A

Question: 2

You are a SharePoint administrator for Blue Yonder Airlines. You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. You need to increase the available disk space on Server1 and Server2 before you upgrade the farm. What should you do?

- A. Take all of the content databases offline.
- B. Shrink the content database files.
- C. Reset the indexes and perform a full crawl.
- D. Activate the Content Organizer on all of the site collections.

Answer: A

Question: 3

You are a SharePoint administrator for Blue Yonder Airlines. You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. You need to recommend an authentication method for the Web applications in the SharePoint Server 2010 farm that meets the company's security requirements. Which authentication method should you recommend?

- A. Basic
- B. NTLM
- C. Kerberos
- D. Claims

Answer: D

Question: 4

You are a SharePoint administrator for Blue Yonder Airlines. You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. You are evaluating whether to implement an in-place upgrade to SharePoint Server 2010. You need to identify how many index partitions will be created during the in-place upgrade. How many index partitions will be created?

- A. 4
- B. 1
- C. 6
- D. 2

Answer: D

Question: 5

You are a SharePoint administrator for Blue Yonder Airlines. You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. You need to recommend a strategy to migrate all SharePoint Server 2007 content to SharePoint Server 2010. What should you include in the recommendations?

- A. The document conversions services
- B. Content deployment paths
- C. Alternate access mapping URL redirection
- D. Microsoft Internet Information Services (IIS) Migration Tool

Answer: C

Case Study: 5

Graphic design institute

Technical Requirements

Graphic Design Institute has the following technical requirements for the planned SharePoint Server 2010 deployment:

Four times a year, a site must be created for each course. Each course site must be deleted six months after it was created.

Each course site must contain a custom Web Part that retrieves data from a metadata search.

Each course site must contain a custom navigation bar.

Each course site must contain a proprietary file type.

The load time for each course site must be minimized.

Database Requirements

Graphic Design Institute has the following database requirements for the planned SharePoint Server 2010 deployment:

The latency of search queries for metadata searches must be minimized.

The server farm configuration must be backed up weekly.

White space in the content databases must be minimized.

The number of databases must be minimized.

Student Requirements

Graphic Design Institute has the following student requirements for the planned SharePoint Server 2010 deployment:

Students must be able to manage and organize content that is relevant to them.

Students must be able to share documents with other students.

Security Requirements

Graphic Design Institute has the following security requirements for the planned SharePoint Server 2010 deployment:

Each department must be able to manage the security of its respective course sites.

Each department must be able to manage its respective recycle bin.

Question: 1

You are a SharePoint administrator for Graphic Design Institute. The institute has five departments. Each department offers 20 courses. You plan to deploy SharePoint Server 2010 on the network. You need to recommend a maintenance plan for the content databases that meets the institute's database requirements. What should you include in the recommendations?

- A. Shrink the database every six months.

- B. Defragment the hard disk drives of the Web server every three months.
- C. Reset the search indexes every three months.
- D. Defragment the hard disk drives of the Web server every six months.

Answer: A

Question: 2

You are a SharePoint administrator for Graphic Design Institute. The institute has five departments. Each department offers 20 courses. You plan to deploy SharePoint Server 2010 on the network. You need to recommend a solution for custom sites that meets the institute's technical requirements. What should you include in the solution?

- A. a custom master page
- B. the Content Organizer
- C. a custom theme
- D. site definitions

Answer: D

Question: 3

You are a SharePoint administrator for Graphic Design Institute. The institute has five departments. Each department offers 20 courses. You plan to deploy SharePoint Server 2010 on the network. You need to implement a solution that meets the institute's student requirements. What should you implement?

- A. My Sites and the Content Organizer
- B. Audiences and the Content Organizer
- C. My Sites and social tags
- D. Audiences and user profiles

Answer: C

Question: 4

You are a SharePoint administrator for Graphic Design Institute. The institute has five departments. Each department offers 20 courses. You plan to deploy SharePoint Server 2010 on the network. You need to identify which SharePoint object must be created for each department. Which SharePoint object should you identify?

- A. a site collection
- B. a Web application
- C. a site
- D. a site template

Answer: A

Question: 5

You are a SharePoint administrator for Graphic Design Institute. The institute has five departments. Each department offers 20 courses. You plan to deploy SharePoint Server 2010 on the network. You need to recommend a SharePoint

Server name	Server role(s)	Server hardware
Server1	Web	Virtualized
Server2	Web	Virtualized
Server3	Crawler, query	Virtualized
SQL1	Microsoft SQL Server failover cluster	Physical
SQL2	Microsoft SQL Server failover cluster	Physical

Server 2010 deployment solution that meets the institute's requirements. What should you include in the deployment solution?

- A. Five server farms and one Web application in each server farm
- B. Five server farms and 20 Web applications in each server farm
- C. A single server farm and one Web application
- D. A single server farm and five Web applications

Answer: C

Question: 6

You are a SharePoint administrator for Graphic Design Institute. The institute has five departments. Each department offers 20 courses. You plan to deploy SharePoint Server 2010 on the network. You need to recommend a solution that meets the institute's backup requirements. Your solution must minimize costs. Which tool should you include in the solution?

- A. Microsoft System Center Operations Manager
- B. Microsoft SQL Server Management Studio
- C. Microsoft System Center Data Protection Manager
- D. Central Administration

Answer: D

Case Study: 6

Wide World Importers

Current Environment

The company uses Windows Server 2008 Hyper-V for server visualization.

The company acquires a partner company that has a SharePoint Server 2010 server farm. The farm has 500,000 documents contained in a Web application. The Web application has one site collection.

You plan to implement SharePoint Server 2010.

Planned Server Configuration

As part of the SharePoint Server 2010 solution, you plan to deploy the servers configured as shown in the following table.

You plan to deploy all of the SharePoint Server 2010 servers in a single server farm named SharePoint -Farm. You also plan to deploy a hardware load balancer to distribute queries between Server1 and Server2.

Technical Requirements

Wide World Importers has the following technical requirements for the planned SharePoint Server 2010 deployment:

All documents must be migrated from the partner company to SharePoint -Farm.

All migrated documents must be read-only.

Access to the migrated documents must use Forms-based authentication.

Access to all other SharePoint content must use Windows authentication.

If a single physical server or a virtual server fails, users must be able to receive search results for all content in the organization.

Monitoring Requirements

You plan to monitor the following search metrics for SharePoint -Farm:

Crawl queue

Query latency

Crawl rate per type

Question: 1

You are a SharePoint administrator for Wide World Importers. You migrate all of the documents from the partner company to a new Web application. You configure the Web application to use Forms-based authentication. You discover that search results exclude the migrated documents. The search results include all other documents. You need to ensure that the search results include all of the migrated documents. What should you create?

- A. a crawl rule
- B. a search scope
- C. a host distribution rule
- D. a crawler impact rule

Answer: A

Question: 2

You are a SharePoint administrator for Wide World Importers. You need to identify the minimum number of Hyper-V servers required for the planned deployment of SharePoint Server 2010. How many servers should you identify?

- A. 3
- B. 5
- C. 1
- D. 2

Answer: D

Question: 3

You are a SharePoint administrator for Wide World Importers. You need to recommend a solution that meets the company's monitoring requirements. What should you recommend?

- A. Web Analytics reports
- B. SharePoint Health Analyzer
- C. administrative reports
- D. Internet Information Services (IIS) logs

Answer: C

Server name	Server operating system	Server role
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Microsoft SQL Server 2005

Question: 4

You are a SharePoint administrator for Wide World Importers. You need to recommend a solution to migrate all documents from the partner company to SharePoint-Farm. What should you include in the solution?

- A. Read-only databases
- B. Information Rights Management (IRM)
- C. Site Collection policies
- D. Offline databases

Answer: A

Question: 5

You are a SharePoint administrator for Wide World Importers. You need to ensure that users can receive search results for all content in the organization if a single server fails. What should you do?

- A. Add a new crawl component.
- B. Create multiple server name mappings.
- C. Implement query component mirroring.
- D. Implement host distribution rules.

Answer: C

Question: 6

You are a SharePoint administrator for Wide World Importers. You need to recommend a solution to ensure that new content added to the SharePoint sites is included in all search results within 30 minutes of being added. What should you include in the solution?

- A. crawl components
- B. index partitions
- C. property databases
- D. crawl databases

Answer: A

Case Study: 7**Trey Research****Server Configurations**

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

The current environment does not use Excel Services, InfoPath Forms Services, or the Business Data Catalog. The SharePoint sites are accessed via a hardware load balancer.

Business Continuity Requirements

Business critical SharePoint lists must be backed up and restored independently of other SharePoint content. Restored lists must retain their list views and alerts.

SharePoint patches and service packs must be tested before they are deployed to the production environment.

Departmental Requirements

Trey Research has the following departmental requirements for the planned SharePoint Server 2010 deployment:

Human resources department documents must only be accessible to users in the human resources department.

Accounting department documents must only be accessible to users in the accounting department.

Users in each department must be able to create and use their own search scopes.

Users in each department must be able to manage their own search keywords.

User Requirements

Trey Research uses a custom content type for its research department documents. Research department documents must be created across multiple site collections. You must be able to use the same content type across multiple site collections. You must use the minimum amount of administrative effort to move content to the SharePoint Server 2010 environment. Users must be able to search all of the SharePoint content from a single Web Part. Searches must include results from Bing.com.

Question: 1

You are a SharePoint administrator for Trey Research. You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010. You need to design a maintenance strategy that meets the company's business continuity requirements. What should you include in the strategy?

- A. separate site collections
- B. sandboxed solutions
- C. a separate server farm
- D. an additional Web server

Answer: C

Question: 2

You need to design a solution to ensure that all Web servers can access their databases if a single database server fails. Your solution must minimize costs. What should you include in the solution?

- A. failover clustering
- B. Windows Network Load Balancing
- C. hardware load balancing
- D. SQL Server log shipping

Answer: A

Question: 3

You are a SharePoint administrator for Trey Research. You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010. You need to recommend a solution that meets the requirements

of the human resources department and the accounting department. Your solution must minimize costs. What should you recommend?

- A. One server farm, one site collection, and two subsites
- B. One server farm, one site collection, and two document libraries
- C. One server farm and two site collections
- D. Two server farms and one site collection in each server farm

Answer: C

Question: 4

You are a SharePoint administrator for Trey Research. You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010. You need to recommend a solution to minimize the amount of administrative effort required to manage the Research department documents. What should you recommend?

- A. content deployment paths
- B. InfoPath Forms Services
- C. a Managed Metadata Service application
- D. a Business Connectivity Service application

Answer: C

Question: 5

You are a SharePoint administrator for Trey Research. You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010. You need to plan a search strategy that meets the company's user requirements. What should include in the strategy?

- A. a federated search
- B. search scopes
- C. dedicated crawl servers
- D. additional crawl databases

Answer: A

Question: 6

You are a SharePoint administrator for Trey Research. You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010 Service Pack 1 (SP1). You need to recommend a SharePoint migration strategy that meets the company's requirements. What should you recommend?

- A. alternate access mappings
- B. a database attach upgrade
- C. the Document Conversions Launcher Service
- D. an in-place upgrade

Answer: A

Question: 7

You are a SharePoint administrator for Trey Research. You plan to upgrade the existing Microsoft Office SharePoint Server 2007 environment to SharePoint Server 2010 Service Pack 1 (SP1). You need to recommend a solution to back up the business critical lists. You must restore the lists in the minimum amount of time. What should you recommend?

- A. automated content deployment
- B. scheduled granular backups
- C. server farm backups
- D. database replication

Answer: C

Case Study: 8

Tailspin Toys

Network Configurations

The network contains a perimeter network and an internal network. The internal network and the perimeter network are separated by a firewall.

The perimeter network contains two SharePoint Server 2010 servers named Server1 and Server2.

The internal network contains two servers named Server3 and Server4 that run Microsoft SQL Server 2008.

Server3 hosts a SharePoint content database named SQL_SharePoint . Server4 hosts two non-SharePoint databases named SQL_Toys and SQL_Customers .

Database Configurations

SQL_Toys contains detailed information about the products that Tailspin Toys sells. Each product is assigned a property named Category that is stored in SQL_Toys . The products are classified in SQL_Toys by Category. SQL_Customers contains the credentials that will be used by the customers.

User Access Requirements

The Tailspin Toys Web site must meet the following user access requirements:

Support anonymous access.

Ensure that users can search for products by using SharePoint search.

Ensure that users can filter searches based on product category.

Provide customers with access to a secure site named <https://www.tailspintoys.com/pricing>.

Provide access to a site named <http://www.tailspintoys.com/products> that displays detailed product information.

Technical Requirements

The Tailspin Toys Web site must meet the following technical requirements:

Server2 must be used to index content.

Server1 must be used for user searches.

Content from the SQL_Toys database must be accessible from the SharePoint sites.

Search results from <http://www.tailspintoys.com/products> must display at the top of the page.

Security Requirements

The Tailspin Toys Web site must meet the following security requirements:

Encrypt all access to pricing information.

Ensure that the SQL Servers are on the internal network.

Ensure that all access to the SQL_Toys database is performed by a SQL Server login that uses SQL Server Authentication.

Question: 1

You are a SharePoint administrator for Tailspin Toys.

The company has a main office. The main office is located in London.

The company has 1,000 employees and 1,000 customers.

You plan to create a product information Web site by using SharePoint technologies named www.tailspintoy.com.

You need to recommend a solution to filter the search results based on product category.

What should you include in the solution?

- A. content sources
- B. host distribution rules
- C. authoritative pages
- D. managed properties

Answer: D

Question: 2

You are a SharePoint administrator for Tailspin Toys.

The company has a main office. The main office is located in London.

The company has 1,000 employees and 1,000 customers.

You plan to create a product information Web site by using SharePoint technologies named www.tailspintoy.com.

You need to recommend a solution to display the company's product information on the SharePoint Web site.

What should you include in the solution?

- A. The Secure Store Service and the Business Connectivity Services
- B. Access Services and the Application Registry Service
- C. The User Profile Service and the Business Connectivity Services
- D. The Application Registry Service and the Secure Store Service

Answer: A

Question: 3

You are a SharePoint administrator for Tailspin Toys.

The company has a main office. The main office is located in London.

The company has 1,000 employees and 1,000 customers.

You plan to create a product information Web site by using SharePoint technologies named www.tailspintoy.com.

You need to recommend a solution to rank the search results that meets the company's requirements.

What should you include in the solution?

- A. crawl rules
- B. host distribution rules
- C. authoritative pages
- D. search scopes

Answer: C

Question: 4

You are a SharePoint administrator for Tailspin Toys.

The company has a main office. The main office is located in London.

The company has 1,000 employees and 1,000 customers.

You plan to create a product information Web site by using SharePoint technologies named www.tailspintoys.com.

You need to plan the search topology for the Web site.

What should you implement?

- A. a query component on Server2 and a crawl component on Server1
- B. a crawl component on Server1 and Server2
- C. a query component on Server1 and Server2
- D. a query component on Server1 and a crawl component on Server2

Answer: D

Question: 5

You are a SharePoint administrator for Tailspin Toys.

The company has a main office. The main office is located in London.

The company has 1,000 employees and 1,000 customers.

You plan to create a product information Web site by using SharePoint technologies named www.tailspintoys.com.

You need to recommend a solution that provides customers with access to the company's pricing information. What should you include in the solution?

- A. HTTP and Windows authentication
- B. HTTP over SSL and Forms-based authentication
- C. HTTP and Forms-based authentication
- D. HTTP over SSL and Windows authentication

Answer: B

Question: 6

The company's security team reports that the firewall has too many open ports. You need to identify the port or ports required by SharePoint to access Server4.

Which port or ports should you identify?

- A. TCP port 1433
- B. TCP port 1521
- C. TCP port 445 TCP port 636
- D. TCP port 135 UDP port 135

Answer: A

Case Study: 9

Adventure Works Network Configuration

The company has an internal network and a perimeter network.

Technical Requirements

Adventure Works has the following technical requirements for the planned SharePoint Server 2010 deployment:

The public Web site must be available if a single server fails.

E-mail enabled document libraries must not be used on the public Web site.

E-mail-enabled document libraries must be used internally for content collaboration.

Internal users must be able to search both internal content and public site content from a single Web Part.

A denial-of-service attack on the public site must not prevent internal users from collaborating on content.

Internal users must be able to search new content on the SharePoint servers within 15 minutes of the content being added to the server, even if a single server fails.

Security Requirements

Adventure Works has the following security requirements for the planned SharePoint Server 2010 deployment:

SharePoint user solutions must not be deployed on the public site.

Users who connect to the public site must be denied access to the company's internal resources.

SharePoint solutions used for internal collaboration and SharePoint solutions used for the public site must have separate solution stores.

Business Process

Adventure Works plans to implement the following business processes for the SharePoint Server 2010 deployment:

Only Web administrators will be able to modify content on the public site. All content must be approved by the legal department before it is made available to the public.

Internal users will use Microsoft Office Word to create travel catalogs. The catalogs will be available in the internal collaboration environment. Catalogs must be available as Web pages.

Managers will use scorecards to help measure and monitor key performance indicators (KPIs). The managers must use the KPIs to calculate business metrics.

Question: 1

You are a SharePoint administrator for Adventure Works. You plan to deploy SharePoint Server 2010 to improve internal collaboration for the company. You also plan to use SharePoint Server 2010 as the platform for the company's public Web site. You need to recommend a solution to convert the catalogs. What should you include in the solution?

- A. Microsoft SharePoint Designer
- B. InfoPath Forms Services
- C. Word Automation Services
- D. Access Services

Answer: C

Question: 2

You are a SharePoint administrator for Adventure Works. You plan to deploy SharePoint Server 2010 to improve

internal collaboration for the company. You also plan to use SharePoint Server 2010 as the platform for the company's public Web site. You need to design the server farm deployment. Your solution must minimize costs. What should you include in the design?

- A. One server farm and three site collections
- B. Two server farms and two site collections
- C. Three server farms and two site collections
- D. One server farm and two site collections

Answer: B

Question: 3

You are a SharePoint administrator for Adventure Works. You plan to deploy SharePoint Server 2010 to improve internal collaboration for the company. You also plan to use SharePoint Server 2010 as the platform for the company's public Web site. You need to recommend a strategy to prevent the deployment of SharePoint user solutions on the company's public Web site. What should you recommend?

- A. Stop the Sandboxed Code Service.
- B. Disable the Data Retrieval Services.
- C. Disassociate the site from the Access Services service application.
- D. Require that all assemblies in solutions be signed.

Answer: A

Question: 4

You are a SharePoint administrator for Adventure Works. You plan to deploy SharePoint Server 2010 to improve internal collaboration for the company. You also plan to use SharePoint Server 2010 as the platform for the company's public Web site. You need to plan the search requirements for the internal users. What should you include in the plan?

- A. property databases
- B. index partitions
- C. crawl databases
- D. crawl components

Answer: D

Question: 5

You need to design a public Web site. The design must minimize costs and use the minimum amount of administrative effort. What should you include in the design?

- A. Three Web servers and two Web applications
- B. One Web server and one Web application
- C. Two Web servers and one Web application
- D. One Web server and two Web applications

Server Name	Server Operating System	Server Roles
Server1	Windows Server 2003 (32-bit)	Web, query, index
Server2	Windows Server 2003 (32-bit)	Web, query, index
Server3	Windows Server 2003 (64-bit)	Database

Answer: C

Case Study: 10**A Datum Corporation****Current Environment**

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010. The branch offices use a third-party Lightweight Directory Access Protocol (LDAP) solution to authenticate users.

SharePoint Server 2007 Configuration

The SharePoint Server 2007 environment includes the servers configured as shown in the following table.

Server1 and Server2 are configured to use a hardware load balancer. Server3 runs Microsoft SQL Server 2000 (64-bit).

Technical Requirements

You plan to create a site collection for the company's pricing information. Documents in the site collection that remain unmodified for 90 days must be deleted automatically. The documents in all other site collections must be retained.

Every 120 days, site collection administrators must confirm that their site collections are still in use. If the site collection administrators fail to confirm that their sites are in use, the sites must be deleted automatically.

Security Requirements

A. Datum has the following security requirements for the planned SharePoint Server 2010 deployment:
Users must be assigned the most restrictive permissions possible.

The deployment must support authentication for all branch office users.

Support for the branch office users must not require changes to the client computers.

All authentications to access SharePoint Server 2010 must use a cryptographic exchange.

User Requirements

A. Datum has the following user requirements for the planned SharePoint Server 2010 deployment:

Users must be able to create sites without any help from an administrator.

Users must be able to search for documents in the server farm if a single SharePoint Web server fails.

Question: 1

You are a SharePoint administrator for A . Datum Corporation. The company has a main office and a branch office. The company has 2,000 users. You need to design a search solution to meet the company's user requirements. Your solution must minimize costs. What should you include in the design?

- A. Two servers that have the Web Server role and query component installed, and two servers that have the crawl component installed
- B. Two servers that have the Web Server role and crawl component installed and two servers that have the query component installed
- C. Two servers that have the Web Server role, query component, and crawl component installed
- D. Two servers that have the Web Server role installed, two servers that have the query component installed, and two

servers that have the crawl component installed

Answer: C

Question: 2

You are a SharePoint administrator for A . Datum Corporation. The company has a main office and a branch office. The company has 2,000 users. You need to recommend a solution to delegate site creation. Your solution must meet the company's security requirements. What should you include in the solution?

- A. farm administrators permissions
- B. site collection administrators permissions
- C. designer permissions
- D. self-service site creation

Answer: B

Question: 3

You are a SharePoint administrator for A . Datum Corporation. The company has a main office and a branch office. The company has 2,000 users. You need to recommend a solution to manage the site collections that meets your company's requirements. What should you include in the recommendations?

- A. a Web Application user policy
- B. an information management policy
- C. a Web Application permission policy
- D. site use confirmation and deletion

Answer: D

Question: 4

You are a SharePoint administrator for A . Datum Corporation. The company has a main office and a branch office. The company has 2,000 users. You need to recommend a server upgrade strategy that meets the company's requirements. Your solution must minimize costs. What should you recommend?

- A. Replace the servers that run SharePoint Server 2007 with servers that have IA64 hardware. Install Windows Server 2003 (64-bit).
- B. Replace the servers that run SharePoint Server 2007 with servers that have x64 hardware.
Install Windows Server 2008 (64-bit).
- C. Replace the servers that run SharePoint Server 2007 with servers that have x64 hardware.
Install Windows Server 2003 (64-bit).
- D. Replace the servers that run SharePoint Server 2007 with servers that have IA64 hardware. Install Windows Server 2008 (64-bit).

Answer: B

Question: 5

You are a SharePoint administrator for A . Datum Corporation. The company has a main office and a branch office. The company has 2,000 users. You need to recommend an authentication method for the planned SharePoint Server 2010 deployment that meets the company's security requirements. Which authentication method should you recommend?

- A. Certificate-based authentication
- B. Basic authentication
- C. Digest authentication
- D. Claims-based authentication

Answer: D

Question: 6

You are a SharePoint administrator for A. Datum Corporation. The company has a main office and a branch office. The company has 2,000 users. You need to recommend changes to Server3 to support the SharePoint Server 2010 deployment. Your solution must minimize costs. What should you recommend?

- A. Upgrade Server3 to Windows Server 2003 R2 (64-bit).
- B. Install Microsoft SQL Server 2000 Data Transformation Services (DTS) on Server3.
- C. Upgrade the SQL server on Server3 to Microsoft SQL Server 2005.
- D. Upgrade Server3 to Windows Server 2008 (64-bit).

Answer: C

Case Study: 11

Lucerne Publishing Server Configurations

The network contains an Active Directory forest. The network also contains a Microsoft System Center Operations Manager server and a Microsoft System Center Configuration Manager server. You have a support contract with your hardware vendor that guarantees the replacement of hardware within 24 hours.

Business Requirements

Lucerne Publishing has the following business requirements if a single server fails:

No more than 144 hours of indexed content must be lost.

The Search Service must be recovered within 36 hours.

No more than 15 minutes of content must be lost.

Content must be recovered within 36 hours.

Compliance Requirements

Each customer is assigned a unique identification number. Users must be able to find all content related to a customer by using the customer* s identification number.

Capacity Planning

You have performed capacity planning testing on your Web server. During testing, it was discovered that the crawling process consumed a large amount of resources on the Web server.

You must ensure that the crawling process does not impact user access to SharePoint sites.

Monitoring Requirements

Lucerne Publishing has the following technical requirements for the planned SharePoint Server 2010 deployment:

Weekly reports must be run to ensure that the SharePoint Server deployment meets or exceeds the company's performance specifications.

The reports must contain an aggregated view of all system and application event errors.

Development Process

You have a single developer who is responsible for developing custom code and Web pages. All custom development work will be tested in a dedicated test environment. After the code is validated, it will be deployed to the production server farm.

Security Requirements

The security manager must be responsible for generating and distributing all service account passwords. These passwords must be changed every 30 days.

User Requirements

Users must be able to restore their own deleted documents for as long as one year. Deleted documents must not exceed 20 percent of the site quota.

Question: 1

You need to recommend a backup strategy for the content in a SharePoint site collection. The strategy must meet the following requirements:

Adhere to the company's business requirements.

Minimize the amount of time required to restore the entire server farm.

What should you include in the backup strategy?

- A. granular backups and Microsoft SQL Server transaction log backups
- B. full farm backups and granular backups
- C. full farm backups and Microsoft SQL Server transaction log backups
- D. full farm backups and differential farm backups

Answer: C

Question: 2

You are a SharePoint administrator for Lucerne Publishing. The company has a main office. The main office is located in London. The company has 200 employees. The company manages content for 600 customers and hosts approximately 50 terabytes of content. You plan to implement SharePoint Server 2010 to host and manage the content. You need to recommend a solution to limit search results based on the company's compliance requirements. You must achieve this goal by using the minimum amount of administrative effort. What should you recommend?

- A. content sources
- B. managed properties
- C. search scopes
- D. authoritative pages

Answer: B

Question: 3

You are a SharePoint administrator for Lucerne Publishing. The company has a main office. The main office is located in London. The company has 200 employees. The company manages content for 600 customers and hosts approximately 50 terabytes of content. You plan to implement SharePoint Server 2010 to host and manage the content. You need to recommend a monitoring solution for the crawl component. What should you include in the

recommendations?

- A. System Center Configuration Manager
- B. System Center Operations Manager
- C. Performance Point Service application
- D. Performance Monitor

Answer: A

Explanation:

Question: 4

You are a SharePoint administrator for Lucerne Publishing. The company has a main office. The main office is located in London. The company has 200 employees. The company manages content for 600 customers and hosts approximately 50 terabytes of content. You plan to implement SharePoint Server 2010 to host and manage the content. You need to recommend a solution to retain deleted items. Your solution must minimize costs. What should you recommend?

- A. Implement retention policies and Active Directory Rights Management Services (AD RMS).
- B. Implement Microsoft System Center Data Protection Manager.
- C. Use site quotas in conjunction with the content database settings.
- D. Use site quotas and configure the SharePoint Recycle Bin

Answer: D

Question: 5

You are a SharePoint administrator for Lucerne Publishing. The company has a main office. The main office is located in London. The company has 200 employees. The company manages content for 600 customers and hosts approximately 50 terabytes of content. You plan to implement SharePoint Server 2010 to host and manage the content. You need to recommend a solution to move custom Web Parts from the test environment to the production environment. What should you include in the recommendations?

- A. content deployment jobs
- B. SharePoint farm solutions
- C. variations
- D. content deployment paths

Answer: B

Case Study: 12

Fabrikam Inc

You are a SharePoint administrator for Fabrikam, Inc.

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

Content Management Requirements

Fabrikam has the following content management requirements for the planned SharePoint Server 2010 deployment:

Users respond to numerous requests for proposals (RFPs). Many documents are generated for each RFP. These documents must be grouped logically and must share metadata.

Users must be able to access all RFP documents from a Welcome Page.

Some of the content on the intranet site must be published automatically to the public site.

The intranet site and the public site must have the same taxonomy.

The taxonomy must be managed centrally.

Documents that are uploaded to the server farm must be classified according to the hierarchical taxonomy.

Users in the Tokyo office must be able to translate content on the intranet site from English to Japanese. The users must also be able to create content in Japanese.

A project site template named ProjectSite.wsp must be used by all of the collaboration sites.

Technical Requirements

Fabrikam has the following technical requirements for the planned SharePoint Server 2010 deployment:

Administrators must be able to backup and restore the public site and the intranet site separately.

Users must be able to access the intranet site and the public site if a single server fails.

Backups must run automatically.

Security Requirements

All servers that contain data used by the public site must be physically isolated from the internal servers.

Question: 1

You need to recommend a multilingual solution for the Tokyo office users. You must achieve this goal by using the minimum amount of administrative effort. What should you include in the solution?

- A. variations and content deployment
- B. language packs and variations
- C. a new site for the Tokyo users and language packs
- D. a new site for the Tokyo users and content deployment

Answer: B

Explanation:

<http://technet.microsoft.com/en-us/library/cc262055.aspx>

Question: 2

You are a SharePoint administrator for Fabrikam, Inc. The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto. The company has 2,000 employees. You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management. You need to recommend a solution to simplify the management of RFPs and related documents. What should you recommend?

- A. a custom Document Set content type
- B. content deployment paths
- C. the RecordCenter site template
- D. an information management policy

Answer: A

Question: 3

You are a SharePoint administrator for Fabrikam, Inc. The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto. The company has 2,000 employees. You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management. You need to recommend a solution to minimize the effort required to publish content from the intranet to the public Web site. What should you include in the solution?

- A. page scheduling
- B. content deployment
- C. SharePoint user solutions
- D. Microsoft SQL Server log shipping

Answer: B

Question: 4

You are a SharePoint administrator for Fabrikam, Inc. The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto. The company has 2,000 employees. You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management. You need to recommend a solution to manage the taxonomy. You must achieve this goal by using the minimum amount of administrative effort. What should you include in the solution?

- A. Microsoft InfoPath forms
- B. custom document libraries that use validation formulas
- C. Content Organizer rules

D. Term Store Management in the Managed Metadata Service application

Answer: D

Explanation:

taxonomy = Managed Metadata Service

Question: 5

You are a SharePoint administrator for Fabrikam, Inc. The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto. The company has 2,000 employees. You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management. You need to identify the minimum number of servers required for the planned deployment of SharePoint Server 2010. How many servers should you identify?

- A. Two Web servers and two Microsoft SQL Server servers
- B. Four Web servers and two Microsoft SQL Server servers
- C. Four Web servers and four Microsoft SQL Server servers
- D. Two Web servers and one Microsoft SQL Server server

Answer: C

Explanation:

Backup and restore each site for four offices

Question: 6

You are a SharePoint administrator for Fabrikam , Inc.

The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management.

You need to plan a backup strategy for the server farm. Your solution must minimize costs.

What should you include in the backup strategy?

- A. Microsoft System Center Data Protection Manager
- B. Windows Backup
- C. the backup-spfarm cmdlet and Task Scheduler
- D. backups from Central Administration

Answer: C

Question: 7

You are a SharePoint administrator for Fabrikam, Inc. The company has a main office and three branch offices. The main office is located in Paris. The branch offices are located in New York, Tokyo, and Toronto.

The company has 2,000 employees.

You plan to deploy two SharePoint Server 2010 server farms. One farm will host a corporate intranet Web site and one farm will host a public Web site. The intranet will be used for collaboration and Web content management. You need to ensure that ProjectSite.wsp is the only template used to create collaboration sites. What should you do?

- A. Rename ProjectSite.wsp as Default.wsp.
- B. Deploy ProjectSite.wsp to the root site collection.
- C. Modify the Subsite Template settings for the collaboration environment.
- D. Deactivate the SharePoint Server Publishing feature.

Answer: C

Explanation:

Subsite Template settings

Case Study: 13

Fourth Coffee

Current Environment

Smart cards are deployed in the organization.

The company uses Microsoft SQL Server 2005 (64-bit) to host all of its databases. All SQL servers run Windows Server 2003 R2.

The SQL Server databases are backed up by using SQL Server tools. Database administrators manage and administer all of the SQL Server backups.

You plan to upgrade the Microsoft Office SharePoint Server 2007 server farm to SharePoint Server 2010.

Technical Requirements

Fourth Coffee has the following technical requirements for the planned SharePoint Server 2010 deployment:

All user search results must display a thumbnail preview.

The server farm must be available if a single SQL server fails.

The server farm must be available during server patch maintenance.

Excel Services settings from SharePoint Server 2007 must be migrated to SharePoint Server 2010.

Business Requirements

Fourth Coffee has the following business requirements for the planned SharePoint Server 2010 deployment:

A separate Service Level Agreement (SLA) must be provided for each office.

Database administrators must be able to restore all the content of one office without affecting the content of the other offices.

Security Requirement

All users must authenticate to the SharePoint server farm by using smart cards.

Question: 1

You are a SharePoint administrator for Fourth Coffee. The company has 40 offices. You need to implement an authentication solution that meets the company's security requirements. What should you do?

- A. Create a new Web application zone and create a new ISAPI filter.
- B. Create a new Web application zone and create an auto-enrollment policy for certificates.
- C. Enable SSL and configure certificate mapping.
- D. Enable SSL and create a new ISAPI filter.

Answer: C

Question: 2

You are a SharePoint administrator for Fourth Coffee. The company has 40 offices. You need to recommend a migration solution for Excel Services. Which solution should you recommend?

- A. Perform a database attach upgrade.
- B. Export and import all lists that contain Microsoft Office Excel files.
- C. Backup and restore the Shared Services Provider.
- D. Perform an in-place upgrade.

Answer: D

Question: 3

You are a SharePoint administrator for Fourth Coffee. The company has 40 offices. You need to identify the minimum number of servers required for the planned deployment of SharePoint Server 2010. How many servers should you identify?

- A. 4
- B. 3
- C. 5
- D. 6

Answer: A

Question: 4

You are a SharePoint administrator for Fourth Coffee. The company has 40 offices. You need to recommend a database solution that meets the company's technical requirements. Which database solution should you recommend?

- A. encryption
- B. mirroring
- C. partitioning
- D. snapshots

Answer: B

Case Study: 14

Wingtip Toys

Current Environment

You have a Microsoft Office SharePoint Server 2007 server farm. All users authenticate to external data sources by using Single Sign-On (SSO). You plan to upgrade the server farm to SharePoint Server 2010.

SharePoint Server 2007 Configurations

The SharePoint Server 2007 environment contains the servers configured as shown in the following table.

Server Name	Server Operating System	Server Roles
Server1	Windows Server 2003 (64-bit)	Web, query
Server2	Windows Server 2003 (64-bit)	Web, query
Server3	Windows Server 2003 (64-bit)	Index
Server4	Windows Server 2003 (64-bit)	Web for crawling
Server5	Windows Server 2003 (64-bit)	Database

Servers runs Microsoft SQL Server 2005 (64-bit).

Business Requirements

Wingtip Toys has the following business requirements for the planned SharePoint Server 2010 deployment:

Each department must have a separate workspace.

All taxonomies must be available to all authenticated users.

Users must be able to access the external data sources after the server farm is upgraded to SharePoint Server 2010.

Taxonomy Requirements

Wingtip Toys has the following taxonomy requirements for the planned SharePoint Server 2010 deployment:
Taxonomies must not be replicated.

All legal documents must be maintained in a dedicated taxonomy for the legal department.

All financial documents must be maintained in a dedicated taxonomy for the financial department.

All other company documents must be maintained in a dedicated taxonomy named Corporate.

Technical Requirements

Wingtip Toys has the following technical requirements for the planned SharePoint Server 2010 deployment:
You must be able to monitor all performance counters and Windows events.

A monitoring and alerting solution must be available for all servers in the farm.

Page and output caching must be available for all users in the distribution centers.

Security Requirements

Wingtip Toys has the following security requirements for the planned SharePoint Server 2010 deployment:
Only a user named User1 must be able to manage the corporate taxonomy.

The financial and legal departments must be able to manage only their respective department taxonomies.

User Requirements

Wingtip Toys has the following user requirements for the planned SharePoint Server 2010 deployment:
Searches must be available and up-to-date from 05:00 to 22:00, Monday to Friday.

New content must be included in search results within 30 minutes of being added to the SharePoint Server 2010 servers. The indexing of new content must continue if a crawl server fails.

Question: 1

You are a SharePoint administrator for Wingtip Toys. The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager. You need to recommend which SharePoint Server 2010 feature meets the technical requirements of the distribution centers. Which feature should you recommend?

- A. the Application Registry Service
- B. the enterprise site collection feature
- C. the Content Type Syndication Hub

D. the Publishing Infrastructure

Answer: D

Question: 2

You need to recommend a search solution that meets the company's user requirements. You must minimize the amount of effort required to administer a search. What should you include in the solution?

A.

- Two query servers
- One crawl server
- One mirrored index partition
- Two property databases
- One crawl database

B.

- Two query servers
- Two crawl servers
- Two index partitions
- One mirrored property database
- One mirrored crawl database

C.

- Two query servers
- Two crawl servers
- One mirrored index partition
- One mirrored property database
- One mirrored crawl database

D.

- Two query servers
- Two crawl servers
- One mirrored index partition
- Two property databases
- Two crawl databases

Answer: B

Question: 3

You are a SharePoint administrator for Wingtip Toys. The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager. You need to plan a solution that meets the company's taxonomy requirements. You must ensure that the taxonomy for the legal documents is isolated. What should you include in the solution?

- A. multiple Site Collection policies
- B. multiple Managed Metadata Service applications
- C. a Legal site collection
- D. a Web application zone

Answer: B

Question: 4

You are a SharePoint administrator for Wingtip Toys. The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager. You need to design an authentication solution that meets the company's business requirements. What should you include in the design?

- A. Active Directory Federation Services (AD FS)
- B. SQL Server authentication
- C. the Secure Store Service
- D. the Data Retrieval Service

Answer: C

Question: 5

You are a SharePoint administrator for Wingtip Toys. The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager. You need to identify which service applications are required to implement the company's taxonomy. The minimum number of service applications must be identified. Which service applications should you identify?

- A. Three Search Service Applications
- B. Three Managed Metadata Services
- C. Four Search Service Applications
- D. Four Managed Metadata Services

Answer: B

Question: 6

You are a SharePoint administrator for Wingtip Toys. The company has a main office and 10 distribution centers. The main office is located in Miami. The company has 36 departments. Each department has a department manager. You need to recommend a monitoring solution that meets the company's technical requirements. What should you include in the recommendations?

- A. Diagnostic logging
- B. Health Analyzer rule definitions
- C. Usage logging
- D. Microsoft System Center Operations Manager

Answer: D

Case Study: 15

Woodgrove Bank

Current Environment

You plan to use SharePoint Server 2010 Service Pack 1 (SP1) to implement an intranet-based collaborative environment for the company. You also plan to use SharePoint Server 2010 Service Pack 1 (SP1) to host custom applications.

You plan to create a custom SharePoint list that contains all of the company's customers.

Planned Implementation

You plan to implement the following three server farms:

A server farm named SharePoint-QA that will be used to validate customizations.

A server farm named SharePoint-Dev that will be used for the integration testing of custom solutions.

A server farm named SharePoint-Prod that will be used as the production environment.

After the customizations are validated, they will be deployed on SharePoint-Prod.

User Requirements

Woodgrove Bank has the following user requirements for the planned SharePoint Server 2010

Service Pack 1 (SP1) deployment:

Project managers must be able to store e-mail in the SharePoint sites.

Project managers require that users use e-mail to submit content from outside the organization to the SharePoint sites.

Technical Requirements

Woodgrove Bank has the following technical requirements for the planned SharePoint Server 2010 Service Pack 1 (SP1) deployment:

You must be able to restore SharePoint-Prod from the previous day if it fails.

Certain documents must be associated to customers from the customer database.

Developers must not be able to manage the server farm configurations of SharePoint-QA and SharePoint-Prod.

The company must save all of the documents that are marked as records for 10 years and must save all other documents for five years.

Backup and Restore Requirements

Woodgrove Bank has the following recovery requirements for SharePoint-Prod:

No more than two hours of data must be lost from the customer list.

No more than 24 hours of data must be lost from the entire server farm.

The amount of time required to perform backups and restores must be minimized.

Question: 1

You are a SharePoint administrator for Woodgrove Bank. The company is located in Berlin and has 25,000 employees. You need to recommend a backup strategy to meet the company's backup and restore requirements. What should you recommend?

- A. SharePoint farm backups and Windows Server backups
- B. Microsoft SQL Server differential backups and SQL Server log shipping
- C. SharePoint farm backups and SharePoint granular backups
- D. Microsoft SQL Server differential backups and SharePoint granular backups

Answer: C

Question: 2

You are a SharePoint administrator for Woodgrove Bank. The company is located in Berlin and has 25,000 employees. You need to recommend a document retention solution to meet the company's requirements. What should you include in the recommendations?

- A. Site collection quotas and locks
- B. Information management policies

- C. Web Application user policies
- D. Information Rights Management (IRM)

Answer: B

Question: 3

You need to design a public Web site. The design must minimize costs and use the minimum amount of administrative effort. What should you include in the design?

- A. Content deployment paths
- B. SharePoint solution packages
- C. Microsoft System Center Operations Manager
- D. Microsoft SharePoint Designer

Answer: D

Question: 4

You are a SharePoint administrator for Woodgrove Bank. The company is located in Berlin and has 25,000 employees. You need to identify what you can deploy between SharePoint-Dev and SharePoint-QA by using content deployment. What should you identify?

- A. Web Parts and workflows
- B. Web Parts and event receivers
- C. libraries and views
- D. libraries and Web pages

Answer: B
