Microsoft

MB2-701 PRACTICE EXAM

Extending Microsoft Dynamics CRM 2013

Question: 1

You are running Fetch-based reports in Microsoft Dynamics CRM.
Which component should you add to the computer that has Microsoft SQL Server Reporting Services (SSRS) installed?

A. Microsoft Dynamics CRM Administrative Reports
B. Microsoft Dynamics CRM Reporting Extensions
C. SQL Server Configuration Manager
D. Microsoft Dynamics CRM Report Authoring Extension

Answer: B

Question: 2

Which Microsoft Dynamics CRM web resource is used to validate data that is entered in a te box?

A. XML
B. HTML
C. CSS
D. JavaScript

Answer: D

Question: 3

Which component defines the navigation areas for Microsoft Dynamics CRM for Outlook and Microsoft Dynamics CRM for tablets?

A. SiteMap
B. Application ribbon
C. Style Sheet (CSS)
D. Service endpoint

Answer: A

Question: 4

Which object is used to retrieve the root URL for an organization?

A. GetClientUrl
B. PrependOrgName
C. GetObject
D. GetQueryStringParameters

Answer: A

Question: 5

What is the correct term for a set of components that can be transported between different Microsoft Dynamics CRM organizations?

A. Solution
B. User settings
C. Extensions
D. Data maps

Answer: B

Question: 6

In Microsoft Dynamics CRM, which feature is included as part of the application framework model?

A. presentation
B. asynchronous business logic
C. multi-tenancy
D. web services

Answer: A

Question: 7

You are making a manual edit to the Account entity command bar.
Which section of the file customizations.xml for the Account entity should you update?

A. FormXml
B. SiteMap
C. RibbonDiffXml
D. EntityInfo

Answer: C

Question: 8

You are trying to obtain an Account record from Microsoft Dynamics CRM.
You do NOT know the name of the Account record.
Which method should you use to discover the Account record?

A. RetrieveMultiple
B. Create
C. Retrieve
D. Update

Answer: A

Question: 9

Which three actions can be performed on entity records when you use the Open Data Protocol (OData)?

A. Count
B. Execute
C. Create
D. Delete
E. Update

Answer: C, D, E

Explanation:
Ref:
http://msdn.microsoft.com/en-us/library/gg334279.aspx

Question: 10

You need to programmatically retrieve the current display name of several custom entities by using a Simple Object Access Protocol (SOAP) endpoint.
Which endpoint should you use?

A. Organization Service
B. Organization Data Service
C. Discovery Service
D. Metadata Browser Managed Solution

Answer: A

Question: 11

You are updating an Account record.
Which code segment should you use to set the primary contact value?

```
C A.    account.account_primary_contact.Id = new Guid("38C815A9-E532-E311-98BE-6C3BE5BDAA70");

C B.    account.PrimaryContactId = new EntityReference
        {
          Id = new Guid("8C539CFE-DB57-E311-8B0E-6C3BE5A8017C"),
          LogicalName = "contact"
        };

C C.    Contact = new Contact
        {
          Id = new Guid("8C539CFE-DB57-E311-8B0E-6C3BE5A8017C")
        };
        account.PrimaryContactId = contact;

C D.    account.PrimaryContactId = new Guid("8C539CFE-DB57-E311-8B0E-6C3BE5A8017C");
```

A. Option A
B. Option B
C. Option C
D. Option D

Answer: B

Question: 12

You are working on a Microsoft Dynamics CRM on-premises deployment. Internet-Facing Deployment (IFD) is NOT configured. Which EndpointAccessType value should you use to access the organization¡¯s service endpoint?

A. Default
B. Intranet
C. Passport
D. Internet

Answer: A

Question: 13

You need to return system errors by leveraging the Windows Communication Framework (WCF). Which code segment should you include in your catch statement?

A. ReturnResponses = true
B. ContinueOnError = true
C. FaultException<Microsoft.Xrm.Sdk.OrganizationServiceFault>
D. ContinueOnError = false

Answer: C

Question: 14

Which statement describes the Organization Service?

A. an Open Data Protocol (OData) web service that provides access to the business data for your organization by using a Representational State Transfer (REST) API
B. a web service that provides information about the organizations that are available on the Microsoft Dynamics CRM server by using the Simple Object Access Protocol (SOAP)
C. the public certificate that is required to configure the Windows Azure AppFabric Access Control Service for Microsoft Dynamics CRM integration
D. a web service that provides access to the business data and metadata for your organization by using the Simple Object Access Protocol (SOAP)

Answer: D

Question: 15

You are working on a Microsoft Dynamics CRM deployment in a single organization. Which service provides the information required to access the organization endpoint?

A. Asynchronous Service
B. Organization Service
C. Organization Data Service
D. Discovery Service

Answer: D

Question: 16

In a Microsoft Dynamics CRM environment, you have the following code segment. Line numbers included for reference only.

```
01  using (_serviceProxy = ServerConnection.GetOrganizationProxy(serverConfig))
02  {
03      _serviceProxy.EnableProxyTypes();
04      CreateRequiredRecords();
05      OrganizationServiceContext orgContext = new OrganizationServiceContext(_serviceProxy);
06      _usrId = (from user in orgContext.CreateQuery<SystemUser>()
07          where user.Telephone == "123-456-7890"
08          select user.SystemUserId.Value).FirstOrDefault();
09      _serviceProxy.CallerId = _usrId;
10  }
```

What is the purpose of line 09 in this code segment?

A. Verifies the identity of the user based on their Active Directory telephone number.
B. It is used for Lync integrated authentication.
C. locates the user record based on the incoming Caller ID from the organizations Private Branch exchange (PBX).
D. It is used to impersonate the identity of another user who is using the telephone number to locate the User ID.

Answer: D

Question: 17

You are developing a plug-in that will be used in both Microsoft Dynamics CRM online and on-premises environments. Which trust level is required?

A. partial trust
B. Web services trust model (WS-Trust)
C. full trust
D. root authority

Answer: A

Question: 18

You are deploying a Microsoft Dynamics CRM Online plug-in on a production environment. Which storage system should you use?

A. on-disk
B. Global Assembly Cache (GAC)
C. Microsoft Dynamics CRM database
D. .NET assembly

Answer: C

Question: 19

Which two plug-in stages that are available to developers are always executed during the database transaction?

A. Pre-operation
B. MainOperation
C. Pre-validation
D. Post-operation

Answer: A, D

Explanation:
Ref:
http://msdn.microsoft.com/en-us/library/gg327941.aspx

Question: 20

You are working with entity classes in a Microsoft Dynamics CRM plug-in. You use late binding. Which entity attribute name should you use?

A. DisplayName
C. DisplayCollectionName
C. LogicalName
D. SchemaName

Answer: C

Question: 21

What is a full trust plug-in?

A. a plug-in that is registered with a third-party code-signing authority
B. a plug-in that is registered inside the sandbox
C. a plug-in that is registered for use with Microsoft Dynamics CRM Online only
D. a plug-in that is registered outside the sandbox

Answer: B

Question: 22

How should you register a plug-in for use in multiple organizations and in multiple stages?

A. Register the plug-in once for all organizations on the server and create a single configuration that will be inherited by all plug-in stages.
B. Register the plug-in for each organization individually on the server and create a single configuration that will be inherited by all plug-in stages.
C. Register the plug-in for each organization individually on the server and configure each stage that the plug-in will operate in separately.
D. Register the plug-in once for all organizations on the server and configure each stage that the plug-in will operate in separately.

Answer: C

Question: 23

You are creating a form and workflows for the Credit Status custom entity. The Salesperson role will use a form to review active Credit Status information that the business requires. This information cannot be changed by the Sales users. All users currently have write and append privileges to the Credit Status custom entity.
You need to ensure that users in the Salesperson role cannot edit the Credit Status entity fields.
Which form type and permissions should you use?

A. Use the Undefined form and modify the Salesperson role to remove the append privilege on credit status.
B. Use the Role-based form and modify the Salesperson role to remove the write privilege on credit status.
C. Use the Disabled form and modify the Salesperson role to remove the write privilege on credit status.
D. Use the Read-only form and modify the Salesperson role to remove the append privilege on credit status.

Answer: B

Question: 24

You are creating client-side event-triggered handlers.
What is the maximum number of event handlers that you can specify for each event?

A. 1
B. 5

C. 10
D. 50

Answer: D

Question: 25

Which type is NOT a valid type for a loan query string parameter?

A. Boolean
B. SafeString
C. UnsignedInt
D. Optionset

Answer: D

Question: 26

Which type of code will execute in a Microsoft Dynamics CRM OnLoad form event?

A. C# and Visual Basic .NET
B. CSS
C. JavaScript
D. HTML

Answer: D

Question: 27

Which two conditions must be met before the OnChange event for a field is executed?

A. The field detects keystrokes.
B. The field loses focus.
C. The value of the field is changed by a JavaScript function.
D. The value of the field is changed by the user.

Answer: A, D

Question: 28

Which execution context object method returns a value that indicates the order in which the event handler is executed?

A. getSharedvariable
B. getEventSour
C. getDepth
D. getContext

Answer: C

Question: 29

You develop JavaScript code that adds a function to a form's OnSave event by using the addOnSave method. Where is the function placed in the form event pipeline?

A. A random position in the form event pipeline
B. A position in the form event pipeline that is determined by a parameter value of the addOnSave method
C. The end of the form event pipeline
D. The beginning of the form event pipeline

Answer: C

Question: 30

What is the result of setting event dependencies for a custom JavaScript event?

A. The system prevents the custom event from executing if the defined fields are removed from the form.
B. The values of the defined fields are sent to the custom event as parameters.
C. The defined functions are executed after the custom event.
D. The system prevents users from removing the defined fields from the form.

Answer: D

Question: 31

Which deployment type is supported for custom XAML workflows?

A. both online and on-premises
B. online only
C. Custom XAML workflows are NOT supported for either online or on-premises deployments
D. on-premises only

Answer: D

Question: 32

You develop custom activities that must be included in a Microsoft Dynamics CRM workflow process.
You need to ensure that the activities are available in the workflow steps.
What should you do next?

A. define the variable
B. reference the Windows Workflow Foundation activity library
C. use the Plug-in Registration tool
D. define the input argument

Answer: C

Question: 33

You need to create a series of pages to allow users to enter their usernames and birthdates when prompted. Which process type should you use?

A. Dialogs
B. Actions
C. Business process flow
D. Workflows

Answer: A

Question: 34

You are creating an action in Microsoft Dynamics CRM.
You need to call a dialog rule that will be executed as a new process from the parent process.
Which action type should you use?

A. Link Child Dialog
B. Create Dialog
C. Start Child Workflow
D. Assign Record

Answer: A

Question: 35

In a Microsoft Dynamics CRM on-premises environment, you are creating a custom XAML workflow library in a XAML workflow project by using Microsoft Visual Studio.
You add a new XAML workflow activity item to the project and specify a name for the process you are creating.
Which reference item should you add to the XAML workflow library in order for it to compile successfully?

A. System.Runtime.InteropServices
B. System.Reflection
C. System.Runtime.Serialization
D. System.Runtime.CompilerServices

Answer: C

Question: 36

To which unit of a dialog do you add prompts and responses?

A. Variable
B. Business process flow
C. Page
D. Action

Answer: C

Question: 37

You are developing code that uses an XMLHttpRequest object to update a Microsoft Dynamics CRM record by using the Representational Stat Transfer (REST) endpoint.
You need to ensure that only the specified fields in the request get updated.
Which HTTP verb should you include?

A. GET
B. MERGE
C. DELETE
D. PUT

Answer: C

Question: 38

You write the following code segment to create an Account record by using jQuery and the Representational State Transfer (REST) endpoint. (Line numbers included for reference only.)

```
01  var account = {};
02  account.Name = "Sample Account";
03
04  $.ajax({
05    type : "POST",
06    contentType : "application/json; charset=utf-8",
07    datatype : "json",
08    url : ODataPath + "/AccountSet",
09    data: entity,
10    beforeSend : function (xhr) { xhr.setRequestHeader("Accept", "application/json"); },
11    success : function (data, textStatus, xhr) { successCallback(data.d); },
12    error : function (xhr, textStatus, errorThrown) { errorCallback(errorThrown); }
13  });
```

The variable ODataPath is set correctly.
Which code segment should you include at line 03 to create the new Account record?

A. var entity = DSON.stringify(account),
B. var entity = JSON.parse(account),
C. var entity = $.parseXML(account)t
D. var entity = encodeURI(account),

Answer: D

Question: 39

Which three types are valid types of web resource files?

A. Webpage (HTML)
B. Script (JScript)
C. Style Sheet (XSL)
D. ASP.NET Web Form (ASPX)

E. Active Server Page (ASP)

	Answer: ABC

Question: 40

You are creating a Microsoft Dynamics CRM Solution that will be implemented in multiple organizations.
You need to reference a JavaScript web resource from an HTML web resource in the same Solution.
What should you use?

A. the Xrm.Utility.openWebResource method
B. a relative URL
C. an absolute URL
D. the Swebresource directive

	Answer: B

Question: 41

You are creating and updating records by using Representational State Transfer (REST) in JavaScript. Which SDK script library should you use?

A. JavaScriptRESTAssociateDisassociate.js
B. SDK.DependentOptionSetjs
C. JQueryjs
D. SDK.REST.js

	Answer: D

Question: 42

Which supported script library should you use for Web Resource UI development in cross-browser environments?

A. Prototype.js
B. JQuery.js
C. SDK.REST.js
D. json2.js

	Answer: B

Question: 43

You are building a query to retrieve data from a Microsoft Dynamics CRM database.
You need to query the data by using a SQL SELECT statement.
Which querying option should you use?

A. FetchXML
B. Filtered views
C. LINQ

D. QueryExpression

Answer: B

Question: 44

Which type of Microsoft Dynamics CRM metadata can be retrieved by using the Organization Service?

A. the attributes for an entity
B. the global audit settings for an organization
C. the ConnectionString for an organization
D. the Microsoft Outlook data filters for all users

Answer: A

Question: 45

Which FetchXML function is a valid aggregate function?

A. round
B. max
C. mid
D. first

Answer: B

Question: 46

Which dass can be used to create a custom entity in Microsoft Dynamics CRM?

A. Create
B. CreateEntity
C. CreateRequest
D. CreateEntityRequest

Answer: D

Question: 47

You are updating a Microsoft Dynamics CRM entity.
Which property of an UpdateRequest message should you use to specify the entity to update?

A. Id
B. Item
C. Parameters
D. Target

Answer: D

Question: 48

Which method uses a message-based approach when generating a request?

A. Execute
B. Delete
C. Retrieve
D. Create

Answer: A

Question: 49

You are working with Microsoft Dynamics CRM Online and trying to access the Discovery Service URL.
Which component handles the authentication request?

A. Active Directory
B. NT LAN Manager (NTLM) version 2 authentication
C. security token service (STS)
D. Kerberos version 5 authentication

Answer: D

Question: 50

Which term describes a class that has data types that are NOT checked at compile time?

A. late-bound
B. static
C. early-bound
D. strongly typed

Answer: B

Question: 51

You are working on a Microsoft Dynamics CRM on-premises deployment Intemet-Fadng Deployment (IFD) is NOT configured. Which EndpointAccessType value should you use to access the organizations service endpoint?

A. Passport
B. Default
C. Intranet
D. Internet

Answer: B

Question: 52

Which two authentication types does Microsoft Dynamics CRM On-Premises and Online use to authenticate users? Each correct answer premises part of the solution.

A. Active Directory
B. forms
C. OAuth2
D. claims-based

Answer: A, D

Explanation:
Ref:
http://msdn.microsoft.com/en-us/library/gg334502.aspx
http://blogs.msdn.com/b/crm/archive/2013/10/28/release-scalable-security-modeling-with-microsoft-dynamics-crm-2013.aspx

Question: 53

You must create a new Account record. The Organization Service class has been instantiated, and the necessary properties are set. Which code segment should you use to create the new Account record?

A.
```
Account account = new Account();
account.Name = "Test Account";
CreateRequest request = new CreateRequest();
request.EntityReference = account;
_orgService.Execute(request);
```

B.
```
Account account = new Account();
account.Name = "Test Account";
_orgService.Create(account);
```

C.
```
Account account = new Account();
account.Name = "Test Account";
CreateAccountRequest request = new CreateAccountRequest();
request.Target = account;
_orgService.Execute(request);
```

D.
```
Entity account = new Entity();
account.EntityName = "account";
account["name"].Value = "Test Account";
_orgService.Create(account);
```

A. Option A

B. Option B
C. Option C
D. Option D

Answer: B

Question: 54

You have the following code segment to create a contact. (Line numbers included for reference only.)

```
01  OrganizationServiceContext orgContext = new OrganizationServiceContext(_serviceProxy);
02  Contact contact = new Contact()
03  {
04    FName = "Susanna",
05    LName = "Riddle",
06    AddressStreet1 = "123 Main St.",
07    AddressCity1 = "Jupiter",
08    AddressState = "IA",
09    AddressPostalCode = "21254",
10    new_twittername = "SusannaR",
11    Phone1 = "123-234-5678"
12  };
13  orgContext.AddObject(contact);
```

Which additional step should you add to commit the contact information to the database?

A. orgContext-SaveChanges();
B. _contactId = _serviceProxy.Create(contact);
C. orgContext-SaveObject(contact);
D. contact.SetAttributeValue("name", value);

Answer: A

Question: 55

You make a RetrieveMultiple request against an Account entity. Which type is returned?

A. OrganizationRequestCollection
B. EntityCollection
C. EntityReferenceCollection
D. Entity

Answer: B

Question: 56

You are registering a Microsoft Dynamics CRM plug-in.
You need to ensure that the plug-in can be executed outside the database transaction.
In which execution pipeline stage should you register the plug-in?

A. Main Operation
B. Pre-validation
C. Post-operation

D. Pre-operation

Answer: B

Question: 57

In a Microsoft Dynamics CRM environment you are developing a plug-in by using the following code segment:

```
IPluginExecutionContext context = (IPluginExecutionContext)
  serviceProvider.GetService(typeof(IPluginExecutionContext));
```

What does this code segment provide?

A. contextual information that describes the run-time environment in which the plug-in is executing
B. contextual information that describes the availability of Microsoft Office 365 integration endpoints
C. contextual information that is sent to a remote service endpoint at run-time
D. contextual information that describes pipeline execution context to the Windows Azure Service Bus

Answer: A

Question: 58

Which two assemblies are required when you develop a plug-in to use with custom code and custom entities? Each correct answer presents part of the solution.

A. MicrosoftCrm.Sdk.Proxy.dll
B. MicrosoftXrm.Portal.dll
C. MicrosoftXrm.Sdk.dll
D. MicrosoftXrm.Client.CodeGeneration.dll

Answer: A, C

Explanation:
Ref:
http://msdn.microsoft.com/en-us/library/gg509014.aspx

Question: 59

You use the Microsoft Dynamics CRM SDK to build plug-in code in Microsoft Visual Studio.
Which assembly defines the non-core messages and enumerations needed for working with organization data?

A. Microsoft.Xrm.Sdk.Deployment.dll
B. MicrosoftCrm.SdkProxy.dll
C. MicrosoftXrm.Sdk.dll
D. Microsoft.Xrm.Sdk.Workflow.dll

Answer: B

Question: 60

In which order are synchronous and asynchronous plug-ins executed?

A. Asynchronous plug-ins are executed first in order by rant and then synchronous plug-ins are queued to be executed.
B. Synchronous plug-ins are executed first in order by rant and then asynchronous plug-ins are queued to be executed.
C. Synchronous and asynchronous plug-ins are both executed immediately in order by rank.
D. Synchronous and asynchronous plug-ins are both queued to be executed as resources allow.

Answer: B

Question: 61

Where do you add web resources to a Microsoft Dynamics CRM implementation?

A. the file <system drive>:\Program Files\Microsoft CRM Client\res\Web\Web.config file
B. the Settings area of the Microsoft Dynamics CRM instance
C. the Microsoft Dynamics CRM Web service (CrmService.asmx)
D. the Xrm.Page Script Library Template

Answer: B

Question: 62

You need to verify that an XmlHttpRequest has completed in JavaScript. What should you do?

A. Create an event handler for the onreadystatechange event
B. explicitytly set the Request header to a different HTIP action
C. explicitly set Request header to accept JSON
D. check textStatus for a timeout

Answer: A

Question: 63

Which supported script library uses the S.ajax method?

A. JSON2.js
B. Prototype.js
C. JQuery.js
D. SDK.REST.js

Answer: C

Question: 64

You are including a different version of jQuery as a web resource in a form script.
You need to ensure that your code targets the correct version of jQuery.
What should you do?

A. Create a reference to jQuery by using the following code segment:
```
Xrm$ = jQuery.noConflict(false);
```

Then use $ instead of Xrm$ in your code.

B. Create a reference to jQuery by using the following code segment:
```
Xrm$ = jQuery.noConflict(false);
```

Then use Xrm$ instead of $ in your code.

C. Create a reference to jQuery by using the following code segment:
```
Xrm$ = jQuery.noConflict(true);
```

Then use $ instead of Xrm$ in your code.

D. Create a reference to jQuery by using the following code segment:
```
Xrm$ = jQuery.noConflict(true);
```

Then use Xrm$ instead of $ in your code.

A. Option A
B. Option B
C. Option C
D. Option D

Answer: B

Question: 65

You write the following code segment to create a new account record by using the Representational State Transfer (REST) endpoint. Line numbers are included for reference only.

```
01  var account = new Object();
02  account.Name = "Sample Company";
03  var request = new XMLHttpRequest();
04
05  request.open("POST", ODataPath + "/AccountSet", true);
06  request.setRequestHeader("Accept", "application/json");
07  request.setRequestHeader("Content-Type", "application/json; charset=utf-8");
08  request.onreadystatechange = function () {
09     requestCallBack(this);
10  };
11  request.send(JSON.stringify(account));
```

Which code segment should you include at line 04 to create the URL to the Open Data Protocol (OData) endpoint?

A. var ODataPath = Xrm.Page.context,getClientUrl() + H/XRMServices/2eil/Discovery.svc";

B. var ODataPath * Xrm.Page.context.getClientUrl() + M/XRMServices/2007/Organization.5vcM;

C. var ODataPath = Xrm.Page.context.getClientUrl() + "/XRMServices/2011/OrganizationData.svc";

D. var ODataPath = Xrm.Page.context,getClientUrl() + M/XRMServices/2011/Organization.svc";

Answer: C

Question: 66

You use the following code segment to pass parameters to a Microsoft Silverlight web resource at runtime:
string passTypeName = App.Current.Host.InitParams["abc"];
Which information is passed by using the parameter abc?

A. the unique name of the organization
B. the name of the entity
C. an optional value
D. the GUID that represents a record

Answer: B

Question: 67

Which three features are unique to dialogs?

A. Query CRM Data
B. Prompt and Response
C. Page
D. Stage
E. Check Condition

Answer: ABC

Question: 68

Which security privilege is required to enable the availability of a real-time workflow?

A. CreateWorkflowFromTemplate Message
B. Execute Workflow Job
C. Activate Real-time Processes
D. ExecuteAsync Message

Answer: C

Question: 69

From which base class does a custom workflow activity assembly inherit?

A. System.Activities.Dyna micActivity
B. System.Workflow.Runtime.WorkflowInstance
C. System.Workflow.ComponentModel.Activity

D. System.Activities.CodeActivity

Answer: D

Question: 70

You specify a response type of Option Set (Picklist) in the prompt and response step for a dialog box. What is the maximum number of items that a user can select as part of the response?

A. All items
B. Three
C. The number defined in the dialog¡¯s prompt and response step
D. One

Answer: D

Question: 71

Which element can be created or modified from the Microsoft Dynamics CRM user interface?

A. custom XAML workflows
B. custom buttons on the user navigation bar
C. Site Map
D. business process flows

Answer: D

Question: 72

Which state is a valid state for an activated workflow?

A. Stopped
B. Open
C. Running
D. Ready

Answer: D

Question: 73

You need to ensure that a script is executed as soon as the content of an IFrame has completed loading. Which form event should you use?

A. TabStateChange
B. OnLoad
C. OnReadyStateComplete
D. OnChange

Answer: C

Question: 74

Which JavaScript code segment shows the correct way to set the value of a field that is formatted as a single line of text?

A. Xrm.Page.getAttribute("new_string").setValue("1234");
B. Xrm.Page.getAttribute("new_string").DataValue = "1234";
C. Xrm.Page.gctAttribute("new_string").setValue(1234);
D. Xrm.Page.getAttribute(Mnew_string").setValue() = ,,1234";

Answer: A

Question: 75

Which method does the Xrm.Page object provide for developers to retrieve values passed to a form?

A. getPrimaryAttributeValue
B. getObject
C. getDataXml
D. getQueryStringParameters

Answer: D

Question: 76

You are debugging client-side code for the Microsoft Dynamics CRM mobile client application.
You find that the client-side code is not interacting with web resources and IFrames.
Which explanation is a valid reason why the client-side code is NOT working as anticipated?

A. You did not include the Xrm.Utility.alertDialog function in the code.
B. The mobile device must be capable of running Microsoft .NET Framework 4.5.
C. The mobile device does not have a network connection.
D. The Microsoft Dynamics CRM mobile client application does not support IFrames and web resources.

Answer: C

Question: 77

To which event can you add a function at run-time by using JavaScript?

A. TabStatcChange
B. OnReadyStateComplete
C. OnSave
D. OnLoad

Answer: C

Question: 78

The Xrm.Page object provides a namespace container for which three objects in Microsoft Dynamics CRM? Each correct answer presents part of the solution.

A. data
B. context
C. crmForm
D. ui

Answer: A, B, C

Explanation:
Ref:
http://msdynamicscrmblog.wordpress.com/2013/12/14/javascript-references-in-microsoft-dynamics-crm-2013/

Question: 79
